PUNJAB CANALS—MAJOR AND MINOR WORKS.

DIAGRAM **SHOWING TOTAL AREA IRRIGATED** **BY** **PUNJAB CANALS—MAJOR WORKS.**

PUNJAB CANALS, MAJOR WORKS.

YEAR.	AREA IRRIGATED, IN ACRES.			REMARKS.
	Kharif.	Rabi.	Total.	
1887-1888 ...	645,816	776,929	1,422,775	Lower Chenab Canal opened.
1888-1889 ...	715,682	1,084,325	1,749,957	
1889-1890 ...	661,677	1,201,779	1,863,456	
1890-1891 ...	757,535	1,275,965	2,033,500	
1891-1892 ...	697,454	1,416,088	2,114,392	Sirsa Branch of Western Jumna Canal opened.
1892-1893 ...	323,235	1,024,647	1,347,882	Decrease due entirely to the favourable winter rains of 1892-93 which greatly contracted the irrigated rabi area.
1893-1894 ...	711,001	1,192,653	1,903,654	Decrease as compared with 1891-92, due to general rainfall in rabi 1893-94, and would have been greater but for new irrigation on Chenab Canal.
1894-1895 ...	703,930	1,151,925	1,855,855	Decrease due to very favourable rainfall during rabi, particularly in Sirhind and Western Jumna Canal tracts.
1895-1896 ...	935,827	1,806,556	2,852,383	Increase chiefly due to partial failure of rains of 1895 and subsequent drought.
1896-1897 ...	1,531,969	2,114,334	3,646,303	Increase due to drought.
1897-1898 ...	1,777,565	2,275,721	4,053,286	Increase due to favourable year for irrigation and extensions.
1898-1899 ...	1,413,822	2,455,679	3,872,501	Decrease in kharif due to favourable state of rivers and scanty rainfall.
1899-1900 ...	1,888,308	2,496,574	4,384,882	
1900-1901 ...	2,354,174	2,238,678	4,592,852	
1901-1902 ...	1,686,043	2,805,795	4,491,838	Lower Jhelum Canal opened.
1902-1903 ...	2,071,363	2,792,911	4,864,274	The Upper Sutlej Inundation Canals were transferred from head "Minor Works" to "Major Works" from 1st April 1902.
1903-1904 ...	2,450,789	3,160,019	5,610,808	The Indus Inundation Canals were transferred from head "Minor Works" to "Major Works" from 1st April 1903.
1904-1905 ...	2,351,786	3,307,316	5,659,102	
1905-1906 ...	2,291,460	3,868,911	6,160,371	Decrease in kharif due to cotton failure.
1906-1907 ...	2,435,219	3,467,776	5,902,995	
1907-1908 ...	2,226,291	3,259,035	5,485,326	Decrease due to abnormally low supplies in the rivers.
1908-1909 ...	2,695,518	3,680,532	6,376,050	
1909-1910 ...	2,285,870	3,831,184	6,117,054	
1910-1911 ...	2,251,833	4,016,421	6,270,757	
1911-1912 ...	2,755,324	4,714,321	7,469,645	
1912-1913 ...	2,929,309	4,531,942	7,461,251	Upper Chenab Canal opened
1913-1914 ...	3,069,950	4,281,771	7,351,721	Lower Bari Doab Canal opened.
1914-1915 ...	3,184,751	4,698,877	7,883,628	
1915-1916 ...	2,886,678	5,095,954	7,982,632	Upper Jhelum Canal opened. Decrease in kharif due to drought and abnormally low supplies in the rivers.
1916-1917 ...	3,441,467	5,052,400	8,493,867	

The areas include the Swat River Canal up to 1900-1901, after which date the canal was transferred to the North-West Frontier Province.

From 1894-05 to 1905-1906 the total areas shown are net; thereafter the areas are gross.

PUNJAB CANALS, MINOR WORKS.

YEAR.	AREA IRRIGATED, IN ACRES.			REMARKS.
	Kharif.	Rabi.	Total.	
1887-1888 ...	505,095	413,233	918,328	
1888-1889 ...	571,558	425,870	997,428	
1889-1890 ...	542,112	452,598	994,710	
1890-1891 ...	520,408	462,548	982,956	
1891-1892 ...	452,490	596,664	1,049,154	
1892-1893 ...	491,151	588,558	1,079,709	Rivers rose h'tc, but subsequent supplies were good, and rainfall was favourable, the result being the largest area on record up to date.
1893-1894 ...	469,917	548,747	958,664	Decrease due to the destruction of kharif crops by high floods and to less favourable working of the canals.
1894-1895 ...	500,218	562,048	1,062,266	
1895-1896 ...	477,957	461,243	939,200	
1896-1897 ...	533,745	426,365	960,110	
1897-1898 ...	565,562	592,778	1,158,360	
1898-1899 ...	453,402	530,862	984,264	
1899-1900 ...	520,893	338,629	859,522	
1900-1901 ...	669,563	688,136	1,357,699	
1901-1902 ...	508,416	573,105	981,521	
1902-1903 ...	424,819	390,871	815,690	Decrease due chiefly to the transfer of the Upper Sutlej Inundation Canals from head "Minor Works" to "Major Works" from 1st April 1902.
1903-1904 ...	316,418	463,129	779,547	Decrease due chiefly to the transfer of the Indus Inundation Canals from head "Minor Works" to "Major Works" from 1st April 1903.
1904-1905 ...	296,636	320,616	617,252	
1905-1906 ...	298,279	432,789	751,067	
1906-1907 ...	295,898	507,419	803,317	
1907-1908 ...	258,074	266,484	524,558	
1908-1909 ...	442,058	526,008	968,066	
1909-1910 ...	426,020	513,587	939,607	
1910-1911 ...	159,270	497,015	656,285	
1911-1912 ...	402,641	459,606	862,247	
1912-1913 ...	467,957	509,178	968,135	
1913-1914 ...	461,572	506,871	971,713	
1914-1915 ...	466,107	613,306	1,079,413	
1915-1916 ...	362,607	539,672	902,279	Decrease due to drought and abnormally low supplies in the rivers.
1916-1917 ...	452,348	633,609	1,085,957	

The above includes the areas irrigated by the Sindh Provincial Canals from 1890-1891 inclusive

The above includes the areas irrigated on Ghaggar Canals, British and Bikaner State.

From the year 1891-1895 to 1905-1906 the areas shown are *net*; thereafter the areas are *gross*.

DIAGRAM **SHOWING TOTAL AREA IRRIGATED** **BY** **PUNJAB CANALS—MINOR WORKS.**

REFERENCES.

The first sub-division of each annual column denotes the "Kharif" area, coloured red, and the second the "Rabi" area, coloured blue.
 The black portions represent area remitted; the drab, net areas, from the year 1894-95.

* Excludes the figures relating to the Great River Canal, which now belongs to the North-West Frontier Province. The figures up to 1909-1901 include the figures of that canal.

The gross revenue in column 6 is that actually collected during the year and differs from the revenue as assessed on the area irrigated in the year.

GOVERNMENT OF THE PUNJAB.
PUBLIC WORKS DEPARTMENT.

Irrigation Branch.

No. 1264-R. I.

The 20th December 1917.

Resolution by His Honour the Lieutenant-Governor of the Punjab and its Dependencies.

READ —

Administration Report by the Chief Engineer, Irrigation Works, Punjab, of the Canals in the Punjab for the year 1916-17.

Capital Outlay.

DURING the year under report the expenditure (direct and indirect) on canals in operation classed as Productive or Major Irrigation Works, was Rs. 36,80,696 (Imperial Rs. 36,64,709 and Contribution Rs. 15,387), bringing the total outlay to date to Rs. 23,60,93,960, including Rs. 1,54,77,767 contributed by Native States.

Of the Imperial expenditure during the year the sum of Rs. 31,21,690 was expended on the construction and completion of the Triple Canal system. On the other canals the expenditure was, for reasons of financial stringency, kept very low with the exception of the Lower Chenab Canal, the total expenditure on which was Rs. 5,58,238. This was spent chiefly on the much-needed work of raising the Khanki Weir, to improve control of the river Chenab, and on the Paikhu Spur for the same purpose.

The Upper Bari Doab Canal and the Lower Jhelum Canal showed a credit balance, due to suspense transactions (stock issues to works) and receipts on Capital account, which exceeded the actual expenditure on these canals by Rs. 1,55,923 and Rs. 32,594, respectively.

On canals not classed as Productive, or Minor Works for which Capital and Revenue accounts are kept, there was no expenditure during the year. The up-to-date expenditure on these canals was, therefore, the same as in the previous year, *vis.*, Rs. 8,77,485, including Rs. 2,85,442 contributed by the Bikaner State.

Nature of Seasons.

3. *Kharif* 1916.—The monsoon of 1915 was exceptionally short, and the winter rains of 1915-16 failed almost completely, the drought continuing till June 1916. The result was very low rivers, short supplies in all the canals, and late opening of the Inundation Canals. Early in June the rains broke, and in July and August the rainfall was widespread and plentiful. There was a short break in September, and the monsoon of 1916 ended early in October. A marked feature of the season was that the rainfall was good—in parts excessive—in the Punjab plains, but very moderate in the Himalayas. There was some local damage to crops, due to excessive rainfall. The rivers were remarkably free from high floods, and the higher lands on the Inundation Canals suffered from lack of inundation. The shortage of supplies at sowing time caused a serious contraction in the area under cotton, while the scarcity of fodder led to a great increase in fodder crops. The outturn of food crops except rice was poor owing to excessive late rains in October, but sugar-cane and cotton, on the whole, did well.

Rabi 1916-17.—The excellent monsoon rainfall of 1916, and the heavy rains in the beginning of October, were most favourable for the sowing of the *Rabi*. Unfortunately, however, the winter rains again failed, the season became abnormally dry, and the rivers fell so low that the Jhelum, the Chenab and the Ravi rivers had the lowest supplies on record. The low rivers were probably a direct consequence of the light monsoon in the mid-Himalayas and the subsequent poor snowfall.

The demand for water was very keen, and though it could not be fully met, the small supplies available were distributed to the best effect and the canals again saved the province from very severe scarcity. The general effect on the wheat crop of deficient rain and restricted canal supplies was that, though the outturn of grain was nearly normal, the outturn of 'bhusa' was short.

The grain was of excellent quality, but was much damaged by the untimely rain and hail which fell in April and May, when the grain was ripening or being harvested, necessitating the grant of special remissions under Rule 20 (III) of the Rules under the Canal Act, VIII of 1873.

Area irrigated, etc.

4. The areas irrigated and matured by works of all kinds compare as follows with the corresponding figures for the two previous triennia and for the year 1915-16 :—

Particulars.	AVERAGE OF THE 3 YEARS ENDING		During 1915-16.	During 1916-17.
	1912-13.	1915-16.		
	Acres.	Acres.	Acres.	Acres.
<i>Imperial and Provincial.</i>				
Area irrigated	7,510,770	8,146,997	8,237,866	8,954,131
Area matured	6,982,371	7,779,810	7,805,703	8,351,660
<i>Native States.</i>				
Area irrigated	518,950	576,775	646,925	625,693
Area matured	513,958	572,716	619,234	621,761

Under Imperial and Provincial the area irrigated and area matured exceeded by 716,245 acres and 548,957 acres, respectively, the figures of 1915-16; and by 807,134 acres and 574,820 acres, the average figures of the previous triennium. The increase was due mainly to the expansion of irrigation on the Triple Canal system, and to the very good monsoon rainfall which helped also in increasing the area under irrigation on other canals. Of the Triple Canals the Upper Chenab increased its irrigation from 325,000 acres to 437,000 acres, the Lower Bari Doab Canal from 288,000 to 515,000 acres. These figures indicate very satisfactory progress, but the Upper Jhelum which ran for the first time irrigated only 118,000 acres.

Excluding the Triple Canal system, the total increase on all other canals was 254,683 acres and 271,602 acres, respectively, over the figures of the areas irrigated and matured in the previous year: a very satisfactory result in a year during the greater part of which the supplies were unusually short. The success that attended the operations of the Inundation Canals except the Indus system is a matter of special congratulation.

The reason for the shortage on the Triple Canal system, as a whole, viz., 1,070,018 acres against a forecast of 1,513,367 acres, was that the Upper

Jhelum Canal, on which the working of the Upper Chenab Canal and the Lower Bari Doab Canal is dependent, was opened a year late, and was not able, owing to the newness of its banks, to carry the supply required. The supply in this new canal (Upper Jhelum Canal) is being raised steadily and cautiously, and it is hoped that the forecast will be realized within a few years. The Lower Jhelum and Lower Chenab reports show separately areas irrigated in old and new villages, and the Lieutenant-Governor considers that similar information should be given for all the canals irrigating newly colonised areas.

5. The area on which irrigation charges were remitted was 608,413 acres against 435,824 acres in the previous year. But from these figures must be deducted 175,718 acres and 40,987 acres, respectively, granted remissions under Tenancy rules mostly on the Lower Bari Doab Canal, not for failure of crops, but as part of the terms of colonization. Thus the area of crops that failed amounted to only 428,910 acres, as compared with 395,526 acres in the previous year. *The proportion of the area that failed to the area irrigated was about the same in both years, viz., 4.5 per cent.* About fifty per cent. of the failure was due to flooding by rain, short supplies in the rivers and hail. Other kinds of remissions were normal.

Considering the unusually low supplies in the river and the failure of the winter rains the results have been much better than might have been anticipated.

Financial results.

6. The financial results of the year under review are based on the revenue assessed and collected on the areas irrigated in Rabi 1915-16 and Kharif 1916. The gross receipts from works of all kinds compare as follows with the figures for the year 1915-16 and the two previous triennial periods ending 1912-13 and 1915-16:—

Particulars.	AVERAGE OF THE THREE YEARS ENDING		During 1915-16.	During 1916-17.
	1912-13.	1915-16.		
	Rs.	Rs.	Rs.	Rs.
<i>Imperial and Provincial.</i>				
Major Works	2,77,73,571	3,46,30,569	3,45,89,804	3,90,31,912
Minor Works	17,11,218	19,10,180	18,86,557	20,09,978
Total	2,95,14,789	3,05,40,769	3,04,76,361	4,10,41,890
<i>Native States.</i>				
Major Works	20,85,791	24,47,259	31,88,303	27,96,094
Minor Works	23	2	1	...
Total	20,85,814	24,47,261	31,88,304	27,96,094

The gross receipts under Imperial and Provincial are the highest on record, being about 50 lakhs better than the highest previous record. Both the Major and Minor Works contribute to these excellent results. The amount

collected on the Triple Canal system was Rs. 36,12,074, including Rs. 4,57,796 on account of indirect receipts representing chiefly the interest at 4 per cent. on the sale-proceeds of the Government waste lands on the Upper Chenab and Lower Bari Doab Canals and including only a small amount for land revenue and malikana. The question of indirect credit on these new canals is under consideration. With reference to the remarks in paragraph 7 of the report on the Ghaggar Canals, which are still shown as worked at a loss, the Lieutenant-Governor would be glad if the Chief Engineer should examine the system of credits with the Financial Commissioner.

The working expenses for the year are compared below with the similar figures of the annual averages of the two previous trienna and of the year 1915-16 :—

Particulars.	AVERAGE OF THE TRIENNIUM ENDING		During 1915-16	During 1916-17.
	1912-13.	1915-16.		
IMPERIAL AND PROVINCIAL.				
Major Works ...	Rs.	Rs.	Rs.	Rs.
Minor Works ...	Rs.	Rs.	Rs.	Rs.
Total	Rs.	Rs.	Rs.	Rs.
NATIVE STATES.				
Major Works ...	Rs.	Rs.	Rs.	Rs.
Minor Works ...	Rs.	Rs.	Rs.	Rs.
Total	Rs.	Rs.	Rs.	Rs.

Excluding the three recently constructed canals of the Triple Project, which needed a larger amount for up-keep, the expenditure on Major Works was about normal ; and was incurred chiefly on repairing the damage caused to canal banks by the heavy monsoon, and on the ordinary maintenance and silt clearance.

The expenditure on Minor Works is met out of the ordinary revenue and was restricted to a minimum in accordance with the orders in force regarding retrenchment.

The net revenue for the year compares as follows with that of the previous periods :—

Particulars.	AVERAGE OF THE TRIENNIUM ENDING		During 1916-16.	During 1917-18.
	1912-13.	1915-16.

Major Works ...	12,18,962	15,53,192	15,64,103	17,49,391
Percentage on Capital ...	7 97	10 05	10 12	11 30
Minor Works ...	—3,963	—7,562	—4,763	—8,130
Total ...	12,14,999	15,48,030	15,69,339	17,41,264

On the Major Irrigation Works the net revenue earned showed an increase of about Rs. 50 lakhs over the figures of the previous year. Of this Rs. 17.57 lakhs were contributed by the new canals of the Triple Project, which showed a deficit in the previous year. The increase on the other canals was attributable to the favourable monsoon rainfall in the *khari* crop of the year under report. The *rabi* crop of the year 1915-16, the demand for which was collected during the year, also yielded good financial results as the abnormal drought created an unusually keen demand for the moderate supplies available.

The interest charges for the year amounted to Rs. 70,03,847 and the net profit, after defraying interest charges, was Rs. 2,16,57,591 or 9.82 per cent. on the Capital outlay to date. In the previous year the corresponding figures were Rs. 1,64,21,265 and 7.56 respectively.

The Minor Works have also done well and show an increase of nearly 2 lakhs over the figures of the previous year.

The percentage of net revenue on Capital outlay on the principal canals was as follows:—

Canal.	Excluding interest charges.	Including interest charges.
Western Jumna	10 15	7 00
Sirhind (Imperial)	11 63	8 49
Upper Bari Doab	17 35	14 17
Lower Bari Doab	1 55	—1 62
Upper Chenab	4 88	1 71
Lower Chenab	43 6	40 42
Upper Jhelum	—1 27	—4 45
Lower Jhelum	23 56	20 35
Upper Sutlej Inundation Canals	9 19	6 08
Sidhnai	32 25	29 06
Indus Inundation Canals	4 35	1 14

With the exception of the Upper Jhelum Canal, Upper Sutlej Inundation Canals and Sidhnai Canals, all the other Major Irrigation Works as detailed above showed improvement over the figures of the previous year.

The collections on the Upper Jhelum Canal were for *khari* only, there was no *rabi* crop in 1915-16. The tabular statement above is unfair to the Upper Jhelum Canal, as most of its Capital Expenditure is for the benefit of the Upper Chenab Canal and Lower Bari Doab Canal, and not for local irrigation. For proper comparison with the older canals the three canals should be taken together. For the Triple Canal system as a whole, the net revenue percentages are 1.49 excluding interest charges, and — 1.58 including interest charges. As regards the financial results it has to be borne in mind that no less than one-third of the total income, or 130 lakhs, is made up of indirect receipts on account of land revenue due to the canal, water advantage or owner's rate, proceeds of sales of Government lands in the Colonies. These receipts explain the extraordinarily high profits on the Lower Chenab, Lower Jhelum and Sidhnai Canals on which most of the land irrigated belonged to Government. They also swell the profits for the Punjab Canals, as a whole, which, if indirect receipts were excluded, would amount to only 4 per cent. on the Capital outlay.

General Remarks.

7. This was the first complete year of irrigation from the Upper Jhelum Canal which was opened for irrigation in December 1915. Thus all three canals of the Triple Project were in operation during the year. As the river supplies were unusually low, the question of an equitable distribution of the supply of the three Rivers—Chenab, Jhelum and Ravi—amongst the five canals dependent thereon (Upper and Lower Jhelum, Upper and Lower Chenab and the Lower Bari Doab) had to be considered. A programme of rotational canal turns was arranged by the Chief Engineer, after consultation with the Superintending Engineers of these canals; and the distribution effected thereby proved, on the whole, fair. Experience has indicated the need for certain modifications which are being tried. Certain difficulties in adjusting the conflicting claims of the five canals are inevitable in seasons of short supply, and the Lieutenant-Governor will be glad if in future reports some reference is made to any difficulties which may arise, and the manner in which they have been solved. Our important consideration is to give as timely notice as possible to the officers controlling each system and through them to the irrigators of any reductions in the supply or of contemplated rotational working.

8. Another feature of the year was that the construction estimate of the Triple Project was closed on the 31st March 1917 with an expenditure of Rs. 10,10,66,394 against the estimated amount of Rs. 10,36,81,985, showing a saving of Rs. 26,15,591.

9. The length of channels in operation at the end of March 1917 was 19,267, viz. 4,399 miles of main and branch canals and 14,868 miles of distributaries. Sixty-seven miles of canal and branches and 394 miles of distributaries were opened for the first time for irrigation during the year.

10. The estimated value of crops raised on all canals for the year under review is Rs. 32,09,18,736 as compared with Rs. 27,50,82,336 for the previous year. These figures represent averages of Rs. 35.75 and Rs. 32.4, respectively, per acre matured. The calculations are based on the outturn and prices given in the seasons and crops report for the year 1916-17, and the Lieutenant-Governor believes the estimates to be studiously moderate.

11. The growing importance of irrigation to the people and to Government and the steadily increased profits it secures to both are the strongest arguments for extending the irrigation system wherever conditions are favourable, and several promising projects are now under the consideration of Government:—

- (1) The project estimate for the construction of a barrage across the River Jhelum, at its exit from the Woohar Lake, which was prepared by Mr. R. E. Purves, C.I.E., late Chief Engineer, Irrigation Works, Punjab, in the summer of 1915, and which was noticed in the review for the previous year, is now being further considered in connection with its financial details. The object of this scheme is to store water in the Woohar Lake during the monsoon period for use in the Punjab canals during the rabi season. The Lieutenant-Governor has recently had an opportunity of discussing the project on the spot with Mr. Woods and the Kashmir Darbar and their officials and he trusts it is now on a fair way towards realization.
- (2) In accordance with the orders received from the Government of India in 1915-16, the project estimate in connection with the utilization of the surplus waters of the Sutlej River below its confluence with the Beas, was modified.

This project is intended—

- (i) to maintain the supply of water to the area now served by existing Inundation Canals, and
- (ii) to utilize the balance in the British and Native States territories to the best advantage.

The project is estimated to cost Rs. 9,90,44,075 with an annual income in the 10th year after completion, of Rs. 97,39,365 being a net return of 9.8 per cent. on the cost

- (3) Another very promising scheme now being worked up involves the construction of a dam at Bhakra on the Sutlej River about 40 miles above the site of the head works of the Sirhind Canal to head up to a depth of 360 feet above river bed. It is estimated that this dam will impound about two-and-a-half million foot acres during the summer.
- (4) In connection with the Haveli Project noticed in the last year's review more information, in detail, is being collected regarding available cold weather supplies and the effect at Haveli of a dry river below the Rasul Weir. The project is estimated to cost about 165½ lakhs of rupees and to bring in a return of about 6 per cent. on the capital cost.
- (5) Another important scheme which is being elaborated is the Sindh Sagar Project. Preliminary surveys for which were started in November 1915. This project is intended to irrigate about 2 million acres of land in the Sindh Sagar Doab, from a canal taking out on the left bank of the Indus near Mari and opposite Kalabagh. The scheme was partly investigated in 1912, but was put aside as more promising projects were then considered possible. About 30 per cent. of this country lying in the centre of the Doab is covered with sand hills. Both the Lieutenant-Governor and the Financial Commissioner (Mr. Fagan) toured over the Doab in different directions last spring and the conclusion provisionally arrived at is that excluding the very sandy portion of the Central Doab south of the Jhang-Bhakkar Road, there is an ample area of good land, much of it Government waste, to justify the construction of the canal. Accordingly, a rectangular survey by the Survey Department has been put in hand as a basis for a detailed soil survey to be undertaken later by the Revenue Staff. A large amount of survey work has been carried out by the Irrigation Department and information collected by the Revenue Department at various times during the last 44 years and this can be utilized in working up the rough project.

12. The Lieutenant-Governor is very pleased to see that the question of the risk of water-logging due to seepage from canals on the necessity of which he has so often insisted, is not being overlooked. The Hafizabad tract has been much improved by surface drainage, and it is particularly satisfactory to learn that the abnormal monsoon rains of 1916-17, have not arrested the improvement. Certain reaches of the Main Line and Jhang Branch of the Lower Chenab Canal, were lined with water-proof material, but it is difficult to draw definite conclusions as to the value of the work done, in the absence of precise means of measuring its effect. On the Upper Chenab Canal the local drainages have been surveyed, and proposals for improving them to prevent water-logging are under consideration. Around Amritsar tube-walls

are increasing in number and the operating area of the Hydro-Electric pumping scheme is gradually extending, and its effect on this water-logged tract should soon be noticeable.

13. Paragraph 5 of the report gives details of the punishments, Judicial and Departmental, inflicted for misconduct and inefficiency. There is no Department of Government which is brought into closer relations with the people than the Irrigation Branch and on the honest and efficient discharge of their duties by the great body of officials whom the Department controls, the credit of the administration very largely depends. The responsibility of the Superior Officers of the Department for checking abuses, preventing partiality or exactions on the part of the subordinate establishment is a very heavy one, and the Lieutenant-Governor is glad to observe that this all-important matter is now receiving the attention it merits.

14. The posts of Chief Engineers were held during the year under review by—

			<i>From</i>		<i>To</i>
Mr. W. F. Holms	1-4-1916	...	31-3-1917.
Mr. T. R. J. Ward	1-4-1916	...	30-12-1916.
Mr. F. W. Woods	31-12-1916	...	31-3-1917.

The Lieutenant-Governor recorded his appreciation of Mr. Ward's services in his review of the report for the previous year. He desires to thank Messrs. Holms and Woods for their efficient administration and the officers of the Department—which has been seriously depleted by the number of officers who have volunteered for Military service or Engineering and other work in connection with the War—for their admirable devotion to duty in a year of great strain and the splendid results they have achieved for the Government and the people of the Province.

By order of His Honour the Lieutenant-Governor,

W. F. HOLMS,

Secretary to Government, Punjab.

ADMINISTRATION REPORT

OF THE

CANALS IN THE PUNJAB

FOR THE YEAR

1916-17.

GENERAL.

1. The direct receipts and expenditure of the Irrigation Department during the year were as follows :—

CLASS OF WORKS.		Direct Receipts.	DIRECT EXPENDITURE.		
			Capital.	Working expenses.	Total.
		Rs.	Rs.	Rs.	Rs.
Major Irrigation Works.	Imperial	2,77,00,618	34,55,730	1,03,37,740	1,27,93,470
	Contributions	73,662	15,254	5,44,543	5,59,827
Minor Irrigation Works.	Imperial	9,57,305	...	7,81,860	7,81,860
	Contributions	3,105	3,105
Provincial Canals	...	32,492	...	47,085	47,085
GRAND TOTAL		2,87,04,477	34,71,014	1,17,14,333	1,51,85,317
Average of the three years ending 1915-16.		2,52,97,116	74,35,028	1,05,35,900	1,79,70,928

*Excludes "refunds of revenue."

2. The indirect revenue credited to the canals on account of Enhanced Land Revenue, etc., amounted to Rs. 1,29,51,275.
The average credit on this account of the three previous years amounts to Rs. 1,13,14,514.

3. The following table shows the areas irrigated by the several canals in 1916-17 as compared with the averages of the previous triennium :—

Names of canals.					Average of the three years ending 1915-16.	1916-17.
Major Irrigation Works.					Acres.	Acres.
Western Jumna Canal	...	{ Imperial	759,138	748,763
		{ Patiala State	67,550	79,691
Sirhind Canal...	...	{ Imperial	879,390	891,781
		{ Patiala, Nabha and Jind States	503,202	533,959
Upper Bari Doab Canal	1,153,453	1,201,297
Lower Bari Doab Canal	182,025	514,936
Upper Chenab Canal	233,685	437,477
Lower Chenab Canal	2,280,630	2,286,729
Upper Jhelum Canal	117,605
Lower Jhelum Canal	826,399	804,761
Upper Sutlej Canals...	333,238	313,151

GRAND TOTAL					8,723,772	9,579,824

Financial Results.

4. The canals in the Punjab show the following results for 1916-17 :—

I.—CANALS IN OPERATION CLASSED AS PRODUCTIVE.

Major Works.

				Rs.
Capital expenditure during the year.	Direct charges	34,55,730
	Indirect charges	2,08,979
Total				36,64,709
The capital invested to end of 1916-17 amounted to				22,06,16,193
Income from all sources less refunds (Rs. 7,024) ...				3,96,31,912
Working expenses less refunds (Rs. 7,024) ...				1,09,70,471
Balance excess revenue being 12.99 per cent. on Rs. 22,06,16,193				2,86,61,441
Interest—				
				Rs.
Total Direct outlay to 31st March 1917				21,41,97,441
Less half outlay during 1916-17				17,27,865
Mean Capital at charge				21,24,69,576
Interest on Rs. 21,24,69,576 at 3.2964 per cent.				70,03,847
Net profit after paying interest in 1916-17				2,16,57,594
Ditto ditto 1915-16				1,64,21,265
Ditto ditto 1914-15				1,94,82,697

The earnings of the "9—Major Works" are shown in line 24 of the statement at pages 4 and 5.

II.—IMPERIAL CANALS, MINOR WORKS NOT CLASSED AS PRODUCTIVE.

No capital outlay was incurred during the year on those canals for which Capital and Revenue Accounts are kept, *viz.*, Shahpur Imperial and Ghaggar Canals. The total expenditure on such canals to end of year 1915-16 was, therefore, Rs. 5,92,013, the same as in the previous year.

				Rs.
The income from all sources less refunds (Rs. 480) amounted to ...				19,61,291
Working expenses less refunds (Rs. 480) ...				8,24,572
Balance profit in 1916-17				11,36,719
Ditto 1915-16				9,44,305
Ditto 1914-15				9,47,214

The financial results of each Minor Work are shown in the body of the report.

III.—PROVINCIAL CANALS.

There are only two Provincial Canals in operation, *viz.*, the Shahpur Provincial Canals and the Ravi Inundation Canals.

				Rs.
The income from all sources less refunds (<i>nil</i>) amounted to ...				48,687
Working expenses less refunds (<i>nil</i>) ...				50,013
Balance profit in 1916-17				—1,326
Ditto 1915-16				—5,707
Ditto 1914-15				26,215

5. The total number of dismissals and punishments was 110. Of these 38 were dismissed after departmental enquiry, 5 after judicial enquiry, 7 for serious misconduct, 6 for inefficiency and one for absence without leave. Of the other forms of punishment penal transfers accounted for 24, non-recommendation in rolls 11 and reduction in rank or pay 8. This total does not include disciplinary punishments.

Dismissals and Punishments.

Major Irrigation Works.

WESTERN JUMNA CANAL.

(SUPERINTENDING ENGINEER—MR. G. C. LAURIE.)

1. A small expenditure of Rs. 1,220 (Direct and Indirect) was incurred on completing the subordinates' rest-houses at Jaunti and Anta and the rest-house at Anta.

Capital Account.
Kharif 1916.
Rabi 1916-17.

2. The expenditure amounted to Rs. 1,29,520 (Rs. 1,11,182 under "Imperial" and Rs. 18,338 under "Contribution") and was incurred on numerous small works for increasing the efficiency of the canal and in improvements to buildings.

Extensions and Improvements.

3. The expenditure amounted to Rs. 6,17,830 (Rs. 5,92,095 under "Imperial" and Rs. 25,735, under "Contribution"). In addition to this Rs. 19,557 and Rs. 21,676 were spent by the Patiala and Jind States, respectively, on the maintenance of their distributaries. Apart from ordinary repairs and maintenance of channels and buildings, numerous works of improvement were carried out.

Maintenance and Repairs.

The large Badarpur silting reach, 3 miles long and 1,000 feet wide on Main Line, was again successfully worked.

A 3-mile reach of silting tanks was started between Ghogripur and Jani on the Main Branch.

A marginal bund was constructed, about $1\frac{1}{2}$ miles long, on both banks of the Main Canal at its worst reach, to control the supplies and contain them in one channel. Large sums were also spent on clearance of drains recently taken over from the District Boards and on clearance of Dhanaura Escape on the Main Line.

4. (a) *Kharif*, 1916.—No rain was received in the early part of the season and the river discharge was the lowest on record. There was an enormous demand for filling village tanks and the river supply was quite insufficient to meet the canal indent during April, May and early June. The early arrival of a good monsoon, however, saved the situation which was, otherwise, getting very serious. The cotton crop was lost and dropped from a maximum of 220,330 acres in 1914 to 92,360 acres in 1916. Considerable areas were put down under fodder crops as there had been a fodder famine in the previous cold weather, but the arrival of the early and heavy monsoon enabled most of this to do without irrigation. The *Kharif* crop, though average on the whole, was nearly a lakh of acres below those obtained in 1913 and 1914.

During the monsoon the river was remarkably free from high floods considering the heavy rainfall.

The highest flood gauge registered was 27.5 feet at Ponta on the 18th June against a maximum recorded flood of 38.5 feet on the 14th August 1903.

(b) *Rabi*, 1916-17.—There were good rains in September which ensured a large area of *rabi* sowings. The canal remained in flow for 178 days and was closed for 4 days only in October. The supply was favourable throughout, but there was a keen demand on account of the very large crop and the absence of winter rains. The crop amounted to 480,544 acres, and was the highest on record and was also of good quality.

(c) *Rainfall*.—The following table compares the rainfall during the year with the average of the previous years:—

Station.						1916-17.	Average.
						Inches.	Inches.
Ponta	69.2	57.3
Tajawala	61.7	52.9
Indri	28.7	28.4
Nimak	26.0	23.0
Delhi	23.3	20.7
Karnal	37.3	26.6
Dadupur	52.3	45.3
Hissar	27.0	14.1
Rohtak	21.2	17.7

WESTERN JUMNA CANAL.

WORKING RECORD.

1916-17.

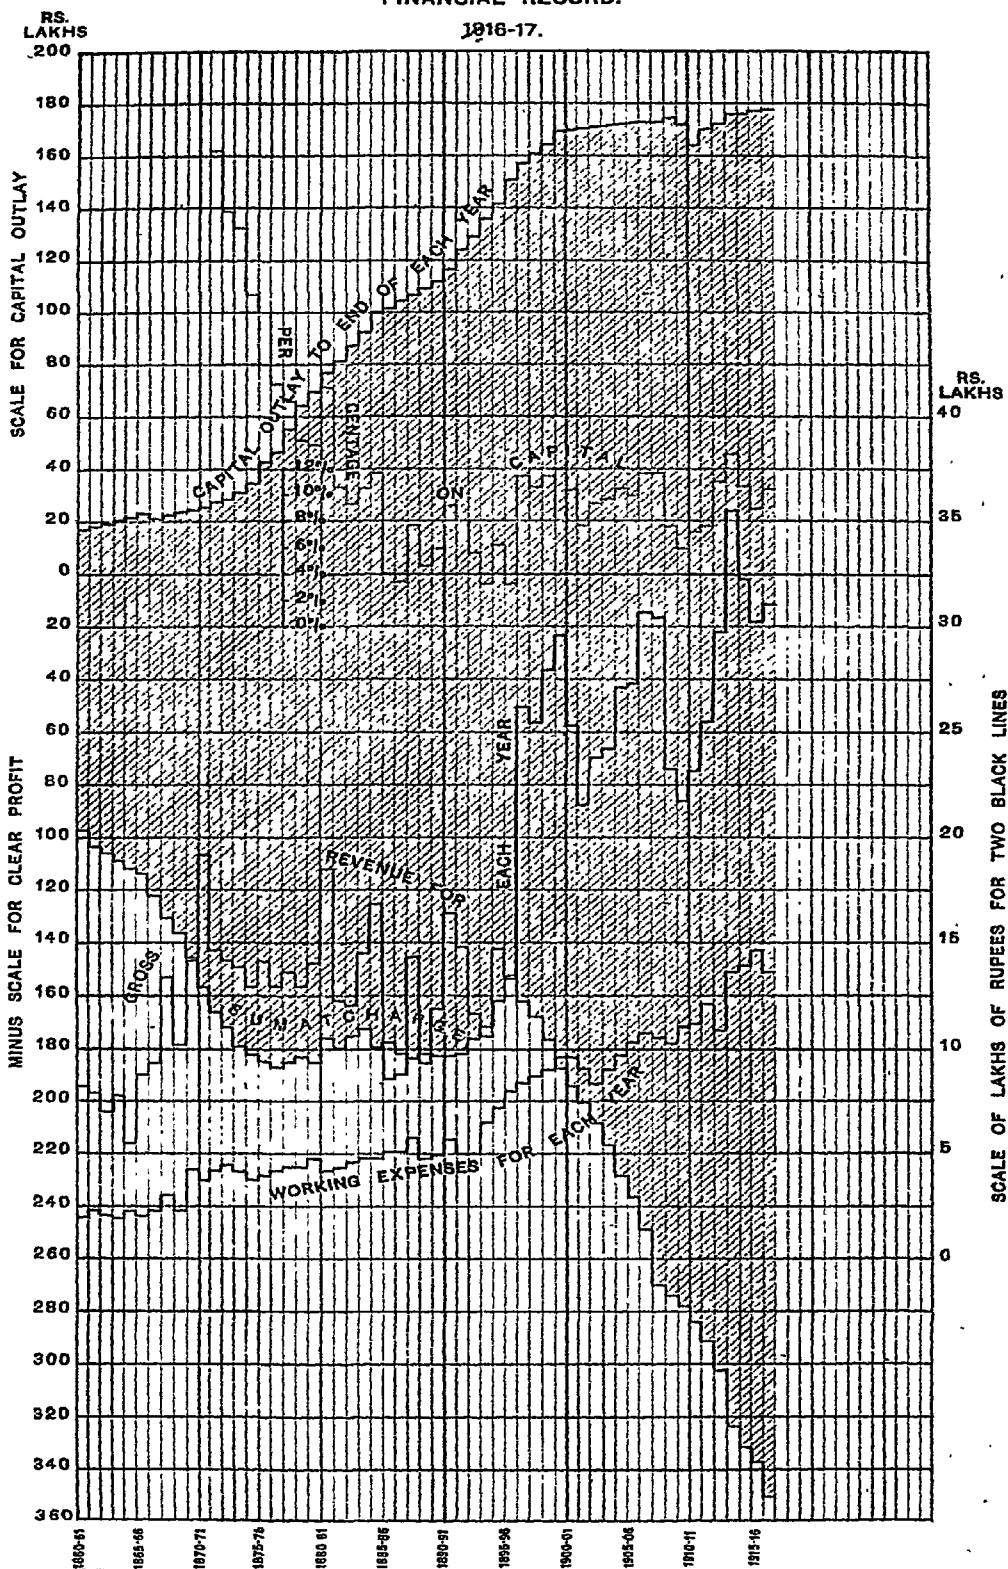

N. B.—The intercepts in the red area show the Kharif acreage each year.
 The areas shown include those done in Patiala State on Sirsa, Branch.
 The discharges are as measured at canal head, and are averages utilized for the whole of each crop.
 The duties are derived from the above areas and discharges.

WESTERN JUMNA CANAL.

FINANCIAL RECORD.

1916-17.

N. B.—This diagram does not include figures for Patiala State on Sirsa Branch; it is "Imperial" only.

The intercepts in the blue area are measures of the accumulated clear profits of the scheme; and if measured on the minus scale the readings are clear profits after reimbursing the whole of the capital expenditure.

This canal was taken over in the early half of the 19th century without the expenditure of any capital; there has therefore never been any arrears of interest, and the sum at charge has never been greater than the capital. In 1900-01, it will be seen that the whole capital had been repaid, and about 194 lakhs in addition as clear gain.

No interest on this clear profit has been allowed for, so that the gain is more than shown.

The intercepts between the black lines show the net revenue each year.

The sudden rise in 1896-97 of gross receipts was due to a famine year, but has been continued since owing to large extensions.

5. The following table gives the irrigation effected during the year: also the averages of the two previous triennia :—

Area irrigated,
Kharif, 1916.
Rabi, 1916-17.

Crop.					AVERAGE FOR THE THREE YEARS ENDING		Area irrigated during 1916-17.
					1912-13.	1915-16.	
					Acres.	Acres.	Acres.
<i>Kharif</i>	835,585	404,117	317,913
<i>Rabi</i>	392,128	422,571	480,544
Total					727,713	826,688	828,157

The area irrigated shows a most satisfactory improvement when compared with that of previous years, and this is due to recent improvements in channels. The area irrigated during *rabi* was the highest on record and exceeded the previous highest in 1912-13 by about 9,000 acres, a most satisfactory result.

The decrease in the *kharif* was due to the unprecedented low supply in the river during the period for sowing.

6. The receipts amounted to Rs. 73,586 and maintenance charges Rs. 5,357, showing a nominal profit of Rs. 68,229 against Rs. 47,113 in 1915-16 and Rs. 59,244 in 1914-15. The profit was largely due to the demand for sleepers created by the war.

No boats are now plying for hire on this canal, the only navigation being raft traffic and boats for carriage of Government material.

7. *Imperial*.—The gross revenue collected during the year amounted to Rs. 31,51,750, which is less by Rs. 1,01,657 than the average for the triennium ending 1915-16.

Financial results based on collection.
Kharif, 1916.

The decrease is due to the poor *kharif* crop of 1916.

The working expenses amounted to Rs. 13,56,021, which is Rs. 24,936 less than the average of the previous triennium.

The net revenue amounted to Rs. 17,95,729 against Rs. 18,72,390, the average of the previous triennium, and Rs. 16,00,937 of the previous year.

Contribution.—The net revenue received by the Patiala State on their channels on the Sirsa Branch amounted to Rs. 1,20,147 or 10.35 per cent. on the capital invested against an average of Rs. 1,52,018 or 13.10 per cent. for the triennium ending 1915-16 and Rs. 1,48,296 or 12.77 of the previous year.

8. (a) *Agricultural and other conditions of the year*.—The canal remained in flow for 339 days during the year and was closed for 22 days during *kharif* and 4 days during *rabi*. The monsoon was a good one and the rainfall above the normal except in the early months of the year. The area of crops remitted amounted to 4,855 acres in *kharif* and 1,879 acres in *rabi*, giving percentages of 1.39 and 0.39, respectively, on the area irrigated, against 6,184 acres for *kharif* and 12,630 acres for *rabi* or 1.71 and 2.72 per cent., respectively, in the previous year.

In the dry districts at Hissar and Rohtak there was severe fodder scarcity during the early *kharif* and the preceding *rabi* crop. Enormous quantities of fodder were imported at concession rates for the cattle and there was great demand for water for village tanks, but despite these measures, a

General Remarks.

large number of cattle died and a large number were sent off to more favoured tracts.

The decrease in number and quality of the cattle had also a detrimental effect on the ploughing for cultivation.

The scarcity had a very unfortunate effect upon plantation. The branches of miles of avenues were lopped by the adjoining villages for fodder for their cattle and the dry branches and twigs blown into the canal channels blocked regulators and bridges and required considerable vigilance on the part of the staff for their prompt removal. It will be some time before the damage to the plantation is made good.

Very little advantage was taken by the zamindars of the concession recently granted for levying no water rates on *Gwar* ploughed in as green manure.

The swampy area along the lower reaches of the Main Line is gradually being improved by the system of expensive silting reaches, and the silted up areas are being now brought under cultivation while the area beyond is being cultivated up to the banks of the silting tanks. The upper reaches of the Main Line also provide most beneficial *sailab* cultivation: several thousand acres of sugarcane and other crops are thus grown from the canal *sailab* free of water rates.

The value of crops assessed to water rates amounted to Rs. 3,51,72,945, which shows that the canal is a very valuable asset to the country.

(b) *Nature and scope of contemplated new works and progress made on the preparation of new projects*—(i) Further designs and estimates for the proposed new Level Crossing at Dadupur have been under consideration. This work is, however, likely to be delayed by the impossibility of obtaining the iron work at a reasonable rate until after the war.

(ii) There are proposals under consideration for remodelling the Head-works at Tajewala.

(iii) There is also a project for substituting minors in place of direct watercourses for the Main Line irrigation.

(iv) The work of redesigning the existing old channels scientifically is being carried forward systematically as funds permit, and the advantage of this is already clear from the increased areas of *rabi* crops.

(c) *Interesting facts relating either internally or externally to the Canal*.—(i) The recent reduction in supply of water to the Delhi neighbourhood carried out at the request of the Chief Commissioner is having most beneficial effects. The garden owners naturally at first protested unanimously against the reductions, but they are now following the example set by official Delhi and are clearing out the thick undergrowth in their gardens and letting in air, and the reduced water supply is found to be sufficient. The insanitary state of these gardens is decreasing and the subsoil water level of the neighbourhood is falling also. The sections of the channels are gradually being reduced to correspond with reduction in discharge.

(ii) Saltpetre has been largely manufactured throughout Rohtak and Hissar Districts owing to the demand for it on account of the war. The water for this manufacture is generally supplied by village tanks filled from the canal, though in some cases local *kacha* wells are used.

(iii) The opening of the Jind-Panipat Railway during the year has been a great convenience to the canal area served by it.

(iv) The introduction of indigo on the canal alluded to in last year's report has not been found to be successful and is being abandoned.

9. *Irrigation in Patiala State*.—The irrigation in the Patiala State from the Sirsa Branch was 32,707 acres in *kharif* and 46,532 acres in *rabi* or a total of 79,439 acres exclusive of 242 acres remitted in *kharif* and 13

acres remitted in *rabi*. The average area assessed for the last two triennia ending 1915-16 and 1912-13 was 67,179 and 61,307 acres respectively.

Irrigation in Jind State.—The supply which the Irrigation Branch has undertaken to allow the Jind State is 353 cusecs in order to irrigate an area of 60,000 acres in the year. The irrigation done during the year was 64,253 acres, resulting in an increase of 6,396 acres or 11.0 per cent. over the figures of 1915-16, i. e., 2,859 acres during *khari*f and 3,537 acres during *rabi*. The average areas irrigated during the two previous triennia ending 1912-13 and 1915-16 were 59,449 acres and 61,640 acres respectively.

Besides the area recorded above, the Jind State gets an average of 1,000 acres of irrigation from the Butana Branch which is assessed at the water rates prescribed for the British areas on the Western Jumna Canal.

The maintenance and assessment connected with all Jind distributaries are controlled by the State itself.

The following table shows the working of the Jind State distributaries as reported by the State :—

Particulars.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
<i>Receipts.</i>	Rs.	Rs.	Rs.	Rs.	Rs.
Occupier's rate	2,60,401	2,84,720	2,83,998	2,62,054	2,59,054
Miscellaneous	5,023	5,340	5,093	5,078	5,800
Total	2,65,424	2,90,060	2,89,091	2,67,132	2,64,854
<i>Working expenditure.</i>					
Establishment	2,414	7,561	7,817	7,397	10,191
Other expenses	24,996	27,258	23,865	31,776	21,676
Occupier's rate paid into British Treasury .	1,42,356	1,31,070	1,31,000	1,31,070	1,31,000
Total	1,71,766	1,65,889	1,62,682	1,70,243	1,62,867
Profit or loss	+84,747	+1,24,261	+1,26,899	+97,559	+1,00,187

Irrigation in Bikaner State.—The Western Jumna Canal has also to irrigate 460 acres annually in the Bikaner State from the tail of the Hissar distributary. The areas actually irrigated were 324 acres in *khari*f and 637 acres in *rabi*, or a total of 961 acres against 483 acres in *khari*f and 85 acres in *rabi* or a total of 568 acres of the previous year. This area pays the ordinary occupier's rates and is assessed by the Canal Staff.

Irrigation in Kalsia State.—The irrigation in Kalsia State from Main Line of the Canal was 739 acres in *khari*f and 793 acres in *rabi* or a total of 1,532 acres exclusive of 23 acres remitted in *khari*f and 117 acres in *rabi*. This area also pays the ordinary occupier's rates and is assessed by the Canal Staff.

The average area assessed for the last three years was 713 acres in *khari*f and 896 acres in *rabi*.

SIREHIND CANAL.

(SUPERINTENDING ENGINEER—MR. E. R. FOX.)

1. (a) **Imperial.**—The expenditure (direct and indirect) amounted to Rs. 36,255 and was incurred on fixing Stoney gates in Rupar undersluices and lock channel, and constructing Executive Engineer's quarters at Rupar; a girder cart bridge at Sahauli, Mile 19, Abohar Branch; and a foot bridge at Bull, Mile 7, Abohar Branch.

(b) **Contribution.**—The expenditure of Rs. 15,234 represents the share borne by the signatory States, of the expenditure incurred on the Head Works and Main Line of the canal.

2. (a) *Imperial*.—The expenditure amounted to Rs. 1,35,272 against Rs. 1,34,403 in the previous year. The only work of importance was the Slab Lining Experiments on the Main Line. A large number of slabs were made, but the work could not be completed for want of a canal closure. Considerable progress was made on raising and widening the sunken bridges on distributaries in the Ferozepore Division. Amongst minor works of importance are—raising and renewing the shoots of Jaghera Mills; constructing drinking reservoirs at certain rest-houses; improving Gahil rest-house and making a telephone office and Gauge-Reader's hut at Gholia.

(b) *Contribution*.—Expenditure amounted to Rs. 1,21,675, of which Rs. 82,383 represents seigniorage charges. The balance of Rs. 39,292 is partly the share of expenditure on works on the Main Line and Head Works and partly the expenditure incurred on huts for petty establishment, erecting iron railings on ramps of bridges, etc., on Native States branches.

3. (a) *Imperial*.—The expenditure was Rs. 5,75,544 against Rs. 4,19,363 in 1915-16. The excess of Rs. 1,56,181 was caused by very heavy expenditure on the Budki, Siswan and Sugh torrents which had been rather neglected in previous years. A regular policy of training and defensive works was instituted. New and substantial forms of protection were adopted and it is confidently anticipated that after further work to be done in 1917-18, based on the experience gained in the current monsoon, we should have an impregnable series of protective works which should necessitate little or no repair work in future years.

Whereas of the works carried out in the ten years prior to 1915 little remains, the substantial works built in the winters of 1915-16 and 1916-17 have on the whole stood very well, and signs of weakness or defects in the designs will be removed this year and the future can be looked to with confidence.

All the above heavy works were carried out in addition to the ordinary maintenance of channels, works and buildings.

(b) *Contribution*.—The expenditure was Rs. 2,22,061 as compared with Rs. 1,42,931 spent in the previous year. The increase is due to heavy work on the torrent crossing the Main Line referred to in the previous paragraph.

4. (a) *Kharif, 1916*.—The canal was in flow for 125 days. The failure of the winter rains of 1915-16 led to a keen demand in the early months for water for fodder crops. This was followed by a heavy and well-distributed monsoon, and demand ceased entirely, so that the canal was closed all August. There was only a moderate demand in September. In spite of good rainfall the area irrigated, owing to extensive sowings early in the year on the whole canal, was the second highest on record, being only about Rs. 10,000 acres less than the maximum of 555,208 acres in *Kharif* 1914.

(b) *Rabi, 1916-17*.—The canal was in flow throughout the season. Owing to a heavy monsoon which was prolonged into October there was not an excessive demand early in the season. The river was high and rotational turns did not begin till 10th November, after which the supply fell and remained low throughout the season. There was no rise in the river owing to the failure of the winter rains and absence of storms in the hills, also there was no snow in the lower ranges of hills. The whole of the available supply was required for land already canal irrigated, and there was no water to spare for the large *barani* area which had been sown and, in the absence of rain, required canal water to mature.

The cultivators on this canal gamble on the rainfall. Had the river been kinder a large portion of the *barani* area would have become canal irrigated to the advantage of the cultivators and the canal.

(c) *Rainfall*.—The table below compares the mean rainfall of the year over the irrigated tract in each district with the average mean of 33 years. The *kharij* rainfall was up to or in excess of the average, but the *rabi* rainfall was in considerable defect:—

District.	Crops.	RAINFALL.		Percentage of actual to average of 33 years.
		1916-17.	Average of 33 years	
Ludbiana	<i>Kharij</i> , 1916 ...	15.58	15.82	
	<i>Rabi</i> , 1916-17 ...	1.74	3.25	
	Total ...	17.32	19.07	91
Perozepore	<i>Kharij</i> , 1916 ...	14.35	11.58	
	<i>Rabi</i> , 1916-17 ...	0.75	2.14	
	Total ...	15.10	13.72	110
Native States	<i>Kharij</i> , 1916 ...	16.70	15.08	
	<i>Rabi</i> , 1916-17 ...	2.40	3.05	
	Total ...	19.10	18.13	105

5. The following table compares the irrigation effected during 1916-17 with the averages of the two triennia ending 1912-13 and 1915-16:—

Area irrigated.
Kharij, 1916.
Rabi, 1916-17.

Crop.			Average of three years ending 1912-13.	Average of three years ending 1915-16.	1916-17.
			Acres.	Acres.	Acres.
BRITISH BRANCHES.					
<i>Kharij</i>	258,200	321,756	333,500
<i>Rabi</i>	605,913	557,934	558,191
Total	864,113	879,690	891,781
NATIVE STATES BRANCHES.					
<i>Kharij</i>	148,528	191,459	211,186
<i>Rabi</i>	207,264	308,743	322,775
Total	445,792	500,202	533,959
BRITISH AND NATIVE STATES BRANCHES.					
<i>Kharij</i>	406,728	516,215	544,774
<i>Rabi</i>	903,177	866,377	880,396
Total	1,309,905	1,382,592	1,425,740

These figures show that the irrigation for the year was in excess of the average of either of the triennia quoted, although there was a decrease of 81,327 acres compared with the area irrigated in the previous year; this defect was in the *rabi*, the *kharif* was a very good one and the second highest on record, 544,774 acres against the maximum of 555,208 acres in *kharif* 1914.

The *rabi* area of 880,966 acres was over the average of the triennium ending 1915-16, but slightly less than the average of the triennium ending 1912-13. The latter period was affected by the *rabi* crops of two very favourable years 1911-12 and 1912-13.

However, we may claim to have had a very favourable year; the total area irrigated has only been surpassed on three occasions, *viz.*, in 1911-12, 1912-13 and 1915-16. The percentages of increase over the triennium ending 1915-16 were 5.53 in *kharif* and 1.63 in *rabi*.

The Native States branches also did very well, the *kharif* area being the highest on record, *viz.*, 211,184 acres.

6. The details of traffic in tonnage and receipts is shown in this table :—

Particulars.	1915-16.	1916-17.
Tonnage carried	31,249	24,209
Value of tonnage	11,72,252	924,557
Toll receipts and raft dues	17,158	15,141
Maintenance charges	5,834	3,628
Number of passengers carried	20,605	18,409

There was a reduction in maintenance charges, and in consequence the net return was better than in the preceding year in spite of lower tonnage and fewer passengers.

7. (a) *British Branches*.—The net revenue earned by the British branches amounted to Rs. 29,76,526 equivalent to 11.63 per cent. on the capital invested as against 7.78 per cent. in the previous year. This favourable result was due to—

Financial results based on Collections.
Rabi, 1915-16.
Kharif, 1916.

(a) the very good *rabi* of 1915-16 (second highest on record) collected in 1916-17;

(b) an uncollected balance of Rs. 1,35,000 at the end of previous year collected during the year;

(c) the very poor *rabi* of 1914-15 (collected in 1915-16).

The following table gives the amount of occupier's rates collected and balance uncollected :—

Year.	Collected.	Balances uncollected.
	Rs.	Rs.
1914-15	35,92,152	28,909
1915-16	28,09,289	1,35,547
1916-17	39,53,965	23,098

The working expenses were Rs. 13,87,150 which was 1,48,292 more than in the previous year. The excess has been explained in paragraph 3 (a) *supra*. The working expenses per acre irrigated were 1.56 against 1.24 in the previous year.

SIRHIND CANAL—BRITISH.

FINANCIAL RECORD.

1916-17.

N. B.—The intercepts in the red area show arrears of interest which, added to the capital, give the sum at charge. Where the two red curves cross all such arrears were wiped off, and there after accumulated profits accrue, as measured by the intercepts in the blue area.

The scheme was begun about 1870 and opened in 1883-84. The lapse from prosperity shown in period 1888 to 1896 was partly due to silt troubles since overcome, and to exceptionally heavy rain.

The intercepts between the black curves give the net revenue.

No interest is charged on the arrears of interest, so the sum at charge is somewhat untrue.

SIRHIND CANAL—BRITISH. WORKING RECORD. 1916-17.

N. B.—The intercepts in the red area give the Kharif acreage each year.

The small areas of 1892 to 1896 were partly due to silt difficulties, but chiefly to heavy rain. The working is more or less unsteady always.

The discharges are measured in main line 26 miles from the head. Of the whole supply 36% goes to Native States, not included here; so that the discharges here shown are only 64% of the actual flow.

These States ought therefore to do areas equal to $\frac{36}{64}$ ths of those shown above. The actual areas done for both crops are shown for comparison by blue circle, and it will be seen that owing to less efficient management they have done less than half the British, instead of $\frac{36}{64}$ ths. In winter the whole river is taken in; in Kharif the supply is more than enough, but the demand is then always low.

(b) *Native States Branches*—The following table compares the figures of collections, assessments, profits and area assessed with the previous year:—

Year.	AMOUNT OF REVENUE.		Area assessed.	PROFIT ON	
	By collection.	By assessment.		Collection.	Assessment.
	Rs.	Rs.			
1915-16 ...	22,46,852	25,94,262	577,811	9-90	12-33
1916-17 ...	25,72,310	24,22,608	532,050	11-35	10-33
More or less ...	+3,25,458	-1,71,654	-45,761	+1-48	-2-00

The profits on "collections" are high because of the good *rabi* crop of 1915-16 collected in 1916-17. The estimated profits on assessments are lower because of the smaller *rabi* crop of 1916-17.

8. *New projects*.—(a) An estimate for constructing two small distributaries for irrigation in the Maler Kotla State has been submitted to the Government of India and their orders are awaited.

(b) The Bhakra Dam Project (in previous years referred to as the Neith Dam) is in course of preparation. The areas to be served and the volumes required for them have now been fixed. All field work is practically finished and alignments of new main channels have been selected. The site of the new headworks below Phillaur near the battlefield of Aliwal of the 1st Sikh War has been fixed. In the reservoir area complete plans have been prepared on village maps showing all details of the submerged areas. Investigations as to silt capacity of water borne in the Sutlej above Bhakra and at Ruper have been carried out. Detailed proposals for the design of the Dam itself, its sluices and spillways are under consideration. It is anticipated that the total area of new irrigation will average 1,500,000 acres annually.

(c) A small project for utilizing the waste waters of the Sutlej Navigation Channel (run in the *kharij* to work mills) to irrigate the country in the neighbourhood of Perotepora is also under preparation.

Effect of enhancement of water-rates.—The effect of enhancement of water rates in the case of sugarcane, cotton and wheat has not been such as to restrict the areas under these crops. Compared with the previous year the results are as follows:—

Sugarcane.—Area irrigated 1,725 acres against 1,071 in the previous year.

Cotton has made a big jump—10,773 acres sown in 1916 against 1,631 acres in the preceding year. This rise is due to far better market rates than prevailed in the previous year.

Wheat.—The area under wheat has dropped from 299,013 in 1915-16 to 258,220 in the year under review, but this falling off is only due to the general decrease in the whole area of the *rabi* crop.

Agricultural conditions.—The year may be looked on as generally favourable. The monsoon of 1916 was favourable and well distributed, permitting large *barani rabi* areas to be sown. If there had been winter rains the crop would have been a bumper one. As it turned out canal irrigated crops were average to good; *barani* crops poor to average.

Some hail in March did slight damage in the Ludhiana and Bhatinda Divisions; considerably more damage was done by the rain which fell in April and May this year which interfered with harvest operations and damaged grain on the winnowing floors.

The area of failed crops on which water-rates were remitted was only 10,212 acres against 32,603 in the preceding year.

Interesting facts.—The period for which the Project Division was sanctioned had to be extended for a year till October 1917. It will be necessary to ask for a further extension of six months.

The necessity for another irrigating Division was recognized, but the scheme is held in abeyance till the cessation of the war owing to additional expenditure involved. The question of extending the area on which perennial should be converted into *kharif* irrigation in order to improve water-logging conditions is under consideration again.

UPPER BARI DOAB CANAL.

(SUPERINTENDING ENGINEER—MR. F. W. K. YEOMANN).

1. The expenditure (direct and indirect) on works, excluding Suspense, amounted to Rs. 1,25,769 against Rs. 4,79,600 in the previous year, and was incurred on remodelling the Head Works at Madhopur; the Hydro-Electric Installation at Amritsar; and lining the Main Branch Lower with cement plaster.

Capital account,
Kharif, 1916.
Rabi, 1916-17.

The sum of Rs. 1,25,769 includes Rs. 34,847 on account of expenditure in England. The Suspense account showed a credit balance of Rs. 1,55,923 compared with the credit balance of Rs. 1,30,418 in the previous year.

2. Expenditure amounted to Rs. 1,06,811 against Rs. 1,02,058 in the previous year, and was chiefly incurred on constructing outlets and culverts, Niaz Beg Distributary; remodelling Ghosal and Tarpai Drains; and providing gates and winches for Sathiali Regulator. Besides these a number of other miscellaneous works of an urgent nature and of small magnitude were executed.

Extensions and Improvements.

3. Expenditure amounted to Rs. 4,63,600 against Rs. 5,36,636 in 1915-16. In addition to the ordinary annual maintenance and repairs expenditure was incurred on the following important items:—Works in the river at the Head Works; shingle clearance from the Main Canal and Feeders; extending boulder pitching in the Main Line and Main Branch Upper and on numerous petty works.

Maintenance and repairs.

4. The total output of manufactures during the year amounted to Rs. 2,13,124 (in addition to the cost of munition work) against Rs. 2,61,834 in the previous year. The percentage charges realized on the value of work done amounted to Rs. 67,560 only against Rs. 1,04,581 of the previous year, but, in addition to this, a sum of Rs. 68,968 on account of departmental charges on munition work was credited. The Power Station of the Amritsar Hydro Electric Pumping Scheme was completed. Munition work continued for about nine months of the year and the expenditure on this special work amounted to Rs. 2,35,033 which was transferred to the Railway Board (Munitions).

Central Workshops.

A considerable amount of work was done for other circles in connection with—

- (i) remodelling Khanki Weir Shutters;
- (ii) fitting the Merala Regulator with standing gear and balanced gates;
- (iii) remodelling the Rasul Regulator, etc.

5. The following table compares the area irrigated during the year with the average of the two previous triennia:—

Area Irrigated,
Kharif, 1916
Rabi, 1916-17.

Crop.				AVERAGE OF 3 YEARS ENDING		AREA IRRIGATED DURING
				1912-13.	1915-16.	1916-17.
				Acres.	Acres.	Acres.
Kharif	498,702	529,633	569,406
Rabi	622,287	623,770	631,991
Total				1,120,989	1,153,403	1,201,407

UPPER BARI DOAB CANAL.

WORKING RECORD.

1916-17.

N. B.—The intercepts in the red area show the Kharif acreage each year.

The discharges are measured at canal head and are averages for each crop.

The duties are derived from these areas and discharges.

Remarks.—The Kharif duty is fairly uniform and increasing slowly.

The Rabi duty is more irregular, due to variation in demand, but is increasing recently.

The Rabi supply decreased fairly steadily from 1891-92 to 1902-03, but nevertheless the areas increased owing to higher duty.

The Kharif supply has increased since 1884 very considerably, owing to the capacity of the canal being enlarged.

Usually the whole of the river winter supply is taken in for the Rabi crop, but after March and up to September the river supply is in excess of requirements.

UPPER BARI DOAB CANAL.

FINANCIAL RECORD.

1916-17.

N. B.—The intercepts in the red area show arrears of interest unpaid up to end of each year, which being added to the capital give sum at charge.

The intercepts in the blue area give the accumulated profits. In 1904-05 the whole capital was reimbursed.

No interest is charged for the sums in the red area, so the diagram is rather distorted in this respect.

The intercepts between the black curves give the net income each year.

Remarks.—The sudden drop at X is partly due to a write-back of about 30 lakhs, but was continued by the rapid development of irrigation in the lower reaches of the canal. Up to 1886-87 the canal worked at a loss, since then it has been very profitable.

Nature of Seasons and State of Demand and Supply.
Kharif, 1916.
Rabi, 1916-17.

6. The mean rainfall is compared with the averages of the previous three years in the following table:—

District.	1916-17.		AVERAGE OF PREVIOUS 3 YEARS ENDING 1915-16.	
	Kharif.	Rabi.	Kharif.	Rabi.
Gurdaspur	28.21	1.51	26.73	7.02
Amritsar	27.56	0.39	17.14	5.49
Lahore	21.89	0.73	12.87	4.09

The monsoon of 1916 was, on the whole, a very favourable one. Rain was general during June, July, August and September, and was particularly heavy during July and August when rain was recorded on 15 and 18 days, respectively, at Madohapur.

A short break occurred from 1st to 17th September, but after that rain continued up to 5th October when the monsoon ended.

From 6th October to the end of March there was no rain except for isolated showers of small amounts during January and March, and the failure of the winter rains put a very great strain upon the canal, more especially as the river supply was abnormally low. However, in spite of the extremely unfavourable conditions, the large rabi area was matured without any unusual remissions having to be given.

7. The net income (direct and indirect) amounted to Rs. 37,89,733, equivalent to 17.35 per cent. on the capital invested against 15.29 per cent. of the previous year.

Financial results based on collections.
Rabi, 1915-16.
Kharif, 1916.

The uncollected balance of occupiers' rate was Rs. 15,912 against Rs. 14,975 at the end of the previous year. Remissions of water-rate amounted to Rs. 1,02,704 against Rs. 84,219 in the previous year. The area for which remissions were granted was 29,076 acres compared with 22,850 acres in 1915-16.

8. (a) *Duty*.—The average duty secured on the supply utilized was 117 acres in kharif and 285 acres in rabi as against 83 and 263, respectively, in the previous year.

General Remarks.

Owing to the failure of the winter rains no extended closure for repairs was possible, but on account of heavy rainfall the canal was closed at the Head from 15th to 28th July.

(b) *Principal crops*.—The principal crops grown during the year are compared in the following table with those grown in the previous year:—

Name of crop.					1916-16.	1916-17.
					Acres.	Acres.
Wheat	241,185	248,539
Barley	6,951	5,375
Rice	72,749	80,854
Maize	86,517	74,569
Millet	45,907	137,379
Cotton	88,290	147,021
Sugarcane	29,301	42,465

*Includes chauri which was not the case last year.

The increase under cotton is noteworthy as it seems to show that the cultivators were eager to take advantage of the high market rates prevailing.

(c) *Agricultural conditions*.—The monsoon of 1916 was extremely favourable and continued up to an unusually late date. Had it not been for this the total failure of the winter rains would have had a much more serious effect upon the agricultural conditions.

Scarcity of water during the *rabi* months prevented the straw growing to its normal length and the outturn of *bhusa* was thus very short, and the untimely rain which fell in April 1917 interfered with harvesting and damaged the grain to some extent.

(d) *Contemplated new works*.—Remodelling Head Works (outlet).

In eight out of twelve bays the old gates were replaced by quick-lifting gates obtained from Messrs. Ransome and Rapier in England and in the remaining four bays similar new gates will be fitted during the next cold weather. The new gates are working very satisfactorily. Four bays of the inlet out of 23 have been fitted with radial arm gates, and it is hoped to provide this type of gate throughout the inlet as soon as materials can be obtained at reasonable rates.

LOWER BARI DOAB CANAL.

(SUPERINTENDING ENGINEER, MR. R. CANNELL).

- | | |
|--|--|
| <p>1. The expenditure (direct and indirect) was Rs. 7,92,271 which raised the total amount debited to the Project at the end of the year to Rs. 2,18,74,263 against the Revised Project Estimate of Rs. 2,20,28,402.</p> | <p>Capital account.
Kharif, 1916.
Rabi, 1916-17.</p> |
|--|--|

The above expenditure includes a temporary debit of Rs. 11,46,636 spent on the construction of water-courses pending recovery from the colonists.

The Revised Project Estimate was closed at the end of the year under review with a saving of Rs. 13,00,715 including the amount to be recovered from colonists.

The expenditure was incurred chiefly on the following works:—

(a) *Head Works*.—Painting ironwork of the Balloki Level Crossing; determining values for the Ravi sand at Balloki to ascertain the limiting safe hydraulic gradient of the barrage; strengthening the Balloki Weir glacis at a cost of Rs. 1,56,451; fixing pressure and relief pipes, for observations, in the new floor; and repairing the stone apron downstream of the weir opposite Bays 1 to 4.

(b) *River Training Works*.—Including necessary maintenance and repairs to embankments and spurs and a planetable survey of the river Ravi above and below the barrage.

(c) *K—Buildings*.—Some quarters for zilladars were completed and the construction of others was held in abeyance owing to stringency of funds due to the war. Superintending Engineer's house and office at Montgomery were completed; also the Nathuwala rest-house. A double set of signallers' quarters (permanent) was constructed at Balloki.

(d) *Plantation*.—Plantation operations were carried out on a small scale only, as expenditure is restricted, avenues were extended and those in existence carefully maintained.

(e) *Distributaries*.—Construction of distributaries 1-L, 2-L, and 8-AR was commenced during the year. 1-L was completed, and the channel excavation of 2-L one-third completed. The project and designs for 8-R were sanctioned.

(f) *Water-courses*.—During the year the construction of water-courses was completed on allotted areas, and in some cases, in advance of colonization.

Extensions and Improvements.

2. An expenditure of Rs. 8,961 was incurred on different petty works.

3. An expenditure of Rs. 3,59,646 was incurred on ordinary maintenance of channels, masonry works and buildings, the process of staunching and consolidating new banks and the encouragement of berm formations were continued zealously.

Maintenance and Repairs.

LOWER BARI DOAB CANAL.

WORKING RECORD.

1916-17

N.B.—The intercepts in the red area show the Kharif acreage each year.
The discharges are measured at canal head and are averages for each crop.
The duties are derived from these areas and discharges.

LOWER BARI DOAB CANAL.

FINANCIAL RECORD,

1916-17.

N. B.—The intercepts in the red area show arrears of interest unpaid up to end of each year, which being added to the capital give sum at charge.

The intercepts between the black curves give the net income each year.

Generally, there were very few breaches, and nowhere was the supply of water restricted and short on account of inefficient channel maintenance.

4. The canal flowed for 343 days (*viz.*, 171 days during *kharif* and 172 days during *rabi*) against 264 days during the previous year. The demand for canal water was good during the *kharif* and very keen in *rabi*.

Nature of Seasons and state of Demand and Supply :
Kharif, 1916.
Rabi, 1916-17.

The rivers in the winter were very low and the water during the *rabi* had to be distributed under a fixed rotational system throughout. Although the Upper Jhelum Canal supplies improved during the winter yet they were still short of full design and, in order to avoid harassment due to the shortage of water, a scheme for water distribution had to be worked out. The winter river supplies proved to be the minimum on record and a shortage was felt.

Rainfall was abnormal during *kharif* 1916 and scanty during *rabi* 1916-17. The rainfall is compared below with the average of the previous year :—

			1916-17.	1915-16.
Lahore	18.42"	4.27"
Montgomery	12.90"	4.19"
Multan	5.46"	2.35"

5. The following table compares the areas irrigated with those of the previous year :—

District.	1915-16.			1916-17.		
	<i>Kharif</i> .	<i>Rabi</i> .	Total.	<i>Kharif</i> .	<i>Rabi</i> .	Total.
Lahore	1,468	1,538	3,006	2,211	1,941	4,152
Montgomery	92,370	131,006	226,376	181,046	106,911	380,957
Multan	21,136	32,726	53,862	62,186	67,641	129,827
Total	114,974	165,270	283,244	245,443	266,493	514,936

Compared with the Project the total area irrigated shows a falling off of 125,064 acres. This was to be expected as the Upper Jhelum Canal, on which the working of this canal is dependent, was opened a year later than it was anticipated in the Project and was not able to carry the full supply intended,—*vide* paragraph 4 above. The abnormally low supply in the rivers and absence of winter rainfall were also the reasons which led to this shortage in irrigation.

6. The gross receipts (direct and indirect) amounted to Rs. 9,64,893 and the working expenses to Rs. 6,26,356, resulting in a net saving of Rs. 3,38,537.

Financial results based on collection :
Rabi, 1916-16.
Kharif, 1916.

7. During the year the Tulamba Sub-Division was constituted in the Khanewal Division for the construction of S-K and S-AR distributaries.

* General Remarks.

The staff of the Montgomery and Okara Divisions were engaged in developing new channels and maintaining a supply of water, necessary for the growth of irrigation. The principal work in the Balloki Division was that of thickening the glacis of the weir at a cost of Rs. 1,65,000. The work was completed satisfactorily.

The Gugera Branch, as a combined *kharif* and perennial channel, was not working satisfactorily and the question of converting it into a perennial channel was under consideration.

Proprietary lands have been broken up and are being irrigated. The available *culturable Crown waste* lands after deducting bad lands, "ghair-mum-

kin," etc., and the total areas of Crown waste land allotted at the beginning and end of the year are given below :—

Canal Division.	CROWN WASTE LANDS, IN ACRES.		
	Culturable area:	Allotted to 1st April 1916.	Allotted to 31st March 1917.
	Acres.	Acres.	Acres.
Balloki ...	}		
Okara ...			
Montgomery ...			
Khanewal ...			
Total ...			

A large area of Crown waste lands of good culturable quality remains to be allotted, and it is necessary for quick development to give them out on temporary leases if not on permanent.

The headquarters of the Circle Office and its staff were moved from Lahore to Montgomery in October 1916.

UPPER CHINAB CANAL.

(SUPERINTENDING ENGINEER—MR. N. WHITE.)

- The construction estimate was closed on 31st March 1917 with an expenditure of Rs. 3,53,42,184 (direct and indirect) including Rs. 8,25,060 transferred to the Upper Jhelum Canal Project, against the Revised Pro-

ject estimate of Rs. 3,65,32,021.

The expenditure during the year amounted to Rs. 8,40,591 and was chiefly incurred in carrying on the construction of the Raya and Nokhar Branch systems; the distributaries on these are now nearly complete; only a few minor channels remain; also in completing the Dog Diversion Channel and on purchasing cast-iron pipes for outlets and on bridges, buildings and embankments.

- The only important work carried out was an extension of one of the river weir groynes at Marala; this groyne was extended downstream to break up a cross current that had set up along the face of the weir; the work, commenced last year, has since been completed and found successful.

The total expenditure was Rs. 25,803 out of which Rs. 21,602 were spent on the above work.

- The expenditure of Rs. 4,65,154 was about 20 per cent. in excess of the previous year, due partly to opening up of new channels and partly to the strengthening of the new banks of the main canal to cope with the higher supplies required by the expansion of irrigation on this and the Lower Bari Doab Canals.

- The following statement compares the rainfall with the previous

Nature of Seasons and state of Demand and Supply. YEARS :—

District.	1912-13.		1913-14.		1914-15.		1915-16.		1916-17.	
	Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.
Sialkot	14.0	2.9	19.0	2.9	25.0	7.7	9.6	1.7	29.48	0.72
Gujranwala	11.7	2.4	15.2	2.4	20.0	5.1	4.2	0.9	24.85	1.24

The monsoon was above normal and the *kharif* crops very fair, but the winter season was again abnormally dry and the river supplies again unusually low; great difficulty was consequently experienced in maturing the *rabi* crops and 9 per cent. failed.

UPPER CHENAB CANAL.

WORKING RECORD.

1916-17.

N. B.—The intercepts in red area give the Kharif irrigation each year. The discharge are measured at Meralia the head of canal and give averages for each crop. The duties are derived from these areas and discharges.

UPPER CHENAB CANAL.

FINANCIAL RECORD.

1916-17.

N. D.—The intercepts in the red area show arrears of interest which, added to the capital, give the sum at charge.

The intercepts between the black curves give the net income each year.

Construction commenced in 1905 and the canal was opened in 1912.

5. The area irrigated compares with the figures for the preceding years :—

Area irrigated :
Kharif, 1916.
Rabi, 1916-17.

Years.	Kharif.	Rabi.	Total.
1912-13	62,691	53,471	116,162
1913-14	123,882	40,228	164,110
1914-15	121,189	90,693	211,882
1915-16	159,152	165,910	325,062
1916-17	285,917	151,560	437,477

The increase in the *kharif* area is remarkable but the *rabi* area, on the other hand, has dropped slightly ; this is entirely due to the failure of the winter rains and the low river supply.

6. The gross receipts, working expenses and net revenue are given below and compared with the previous three years :—

Financial results based on Collections :
Rabi, 1916-16.
Kharif, 1916.

Years.	REVENUE.			Working expenses.	Net Revenue.
	Direct.	Indirect.	Total.		
	Rs.	Rs.	Rs.	Rs.	Rs.
1913-14	5,53,366	5,903	5,59,269	4,03,077	1,56,192
1914-15	6,21,061	2,91,762	8,25,826	7,75,292	50,534
1915-16	9,33,256	61,077	10,17,333	8,33,808	1,83,525
1916-17	23,08,678	2,51,872	25,63,550	8,38,261	17,25,286

The total receipts anticipated in the Project forecast amounted to Rs. 28,53,145 (direct Rs. 20,99,529 and indirect Rs. 7,53,616). Actual direct receipts exceed the forecast. The indirect are short because the system of indirect credits on this canal has not been fully settled ; the question is complicated and is under consideration.

7. The Deg Nallah was active during the monsoon, but the Deg Diversion embankment was maintained intact although the flood water reached as high a level as in 1914 ; the diversion channel has scoured satisfactorily and the possibility of damage by floods thereby reduced.

LOWER CHENAB CANAL.

(SUPERINTENDING ENGINEER—Mr. F. T. BATES.)

1. The expenditure (direct and indirect) amounted to Rs. 5,58,238, bringing the total outlay to date to Rs. 3,23,55,018. The expenditure incurred was mainly on the following works :—Water-proofing the Jhang Branch Upper ; constructing a Regulator in the Jhang Branch Upper near Kot Khudayar for improving command in certain distributary channels ; raising the crest of the Khanki Weir for improving command of the silt conditions at Khanki ; and constructing main and subsidiary revetments at the head of the Palkhu Spur at Khanki for improving river approach to the Canal.

Capital account :
Kharif, 1916.
Rabi, 1916-17.

2. The expenditure amounted to Rs. 5,29,113 and was mainly incurred in the improvement of the right bank river defence works ; the construction of seepage drains for the prevention of water-logging in the Hafizabad Tahsil and in the replacing of the old type of masonry outlets by modules for the rateable distribution of water.

Maintenance and Repairs.

3. Expenditure was Rs. 8,79,613 against Rs. 9,95,947 in the previous year.

Nature of Seasons and state of Demand
and Supply :
Kharif, 1916.
Rabi, 1916-17.

4. In the *kharif* owing to good general rainfall the demand throughout was moderate and canal supply adequate.

In the *rabi* the rainfall was insignificant causing low river and a keen demand for irrigation.

Rainfall.—The following is the record of rainfall during the year compared with that of the three previous years :—

Mean for				Lyallpur District.	Jhang District.	Gujranwala District.
				Inches.	Inches.	Inches.
<i>Kharif</i> , 1916	11.67	8.99	20.78
<i>Rabi</i> , 1916-17	0.77	0.63	0.93
Total				12.44	9.62	21.61
1915-16	2.28	2.92	5.15
1914-15	18.83	13.89	20.73
1913-14	12.34	12.40	17.87

The rainfall in *rabi* is insignificant.

5. The following table compares the irrigation with the averages of the two previous triennia :—

Crop.				AVERAGE OF THE 3 YEARS ENDING		Irrigation of 1916-17.
				1912-13.	1915-16.	
				Acres.	Acres.	Acres.
<i>Kharif</i>	706,322	691,635	715,270
<i>Rabi</i>	1,556,940	1,585,995	1,571,459
Total				2,263,262	2,280,630	2,286,729

Compared with the figures for 1915-16 the area irrigated showed an increase of 2,650 acres. The *kharif* area was more by 63,128 acres while the *rabi* figures were less by 60,478 acres. The *kharif* area was the third highest on record and the *rabi* area the fourth highest.

The total area irrigated—2,286,729 acres—consists of 395,678 acres in old villages and 1,891,051 acres in Colony villages.

6. The net revenue amounted to Rs. 1,41,10,320 (direct and indirect) equivalent to a return of 43.61 per cent. on the Capital Outlay of Rs. 3,23,55,018 incurred to the end of the year.

Financial results based on Collections :
Rabi, 1: 15-16.
Kharif, 1916.

In the previous year the figures of net revenue and percentage on Capital were Rs. 1,26,50,247 and 39.78, respectively.

The increase in net revenue in 1916-17 was due to an increase in the area matured in *kharif* 1916 and the record area of *rabi*. 1915-16, the assessment on which was realized during 1916-17.

The accumulated net profits have increased from Rs. 11,40,60,690 to Rs. 12,71,39,012 against a capital of Rs. 3,23,55,018 invested at the close of the year.

LOWER CHENAB CANAL.

FINANCIAL RECORD.

1916-17.

The discharges are measured at canal head and give averages for each crop.
 The duties are derived from these areas and discharges.
 The Rabi winter supply is comparatively high and reliable on this canal.

1916-17.

7. The canal was closed for 44 days (36 days in *kharif* and only 8 days in *rabi*), so that it ran for 321 days during the year (147 days during *kharif* and 174 days during *rabi*).

General remarks.

The weather and the insufficient supply in the river gave no opportunity for a closure at canal head during the cold weather. The 10 days closures in May, July and August were ordered for the purpose, of scouring out the flume upstream of head regulator as a preventive to silting in the canal. This practice, however, involves an economic loss of water, and a loss of irrigating efficiency, besides being a somewhat ineffective procedure. It has since been realized that in order to exclude from the canal excessive charges of travelling silt, it is necessary to keep the river bed in front of the canal head automatically scoured to a low level; that this state of affairs can only be secured by the maintenance of a certain minimum afflux through the weir-slucices; and that this, again, can only be ensured by raising the crest of the weir. The crest of the weir was raised by two feet in five out of its eight bays (having previously been raised by two feet in the other three bays in the year 1911-12) during the winter of 1916-17, but it is probable that further elevation will be found necessary in the near future in order to complete the design on sound hydraulic principles.

The area remitted amounted to 3,145 acres during *kharif* and 63,110 acres during *rabi*, giving percentages of 0.41 and 4.01, respectively, on the area irrigated. Out of 63,110 acres remitted during *rabi* 31,301 were attributed to short supply of water in the river and 22,747 acres to the extensive damage done by hail to the wheat and gram crops in the Lyallpur and Jhang Districts.

The duty earned by the canal was 79 acres in *kharif* and 230 acres in *rabi* as against 73 and 230 acres in the previous year. The distribution of the waters of the Jhelum and Chenab Rivers equitably between the canals dependent thereon was in force for the first time during the *rabi* of 1916-17. The method of rotational turns adopted was, on the whole, fair, but experience has indicated modifications which will be tried next winter. This question of distributing small uncertain quantities of water over thousands of square miles of country is a difficult one and success can only be attained in the light of experience.

The problem of ensuring a rateable distribution of water in such a way as to place all irrigators on an equal footing and thus to distribute the shortage of winter supply over so large an area as to make it imperceptible in any individual holding is receiving careful consideration.

The steps taken to prevent the increase of water-logging in the Hafizabad Tahsil have been attended with much success, large areas have been reclaimed and considerable areas have been safeguarded against harm from this source.

UPPER JHELUM CANAL.

(SUPERINTENDING ENGINEER—MR. H. W. M. IVES.)

1. This year, the thirteenth since construction began, brought the project estimate to a close with a total expenditure of Rs. 4,38,49,947, debited against it at end of the year. The expenditure during the year amounted to Rs. 14,88,828. The removal of the foreshore

Capital account:
Kharif, 1916.
Rabi, 1916-17.

above the Mangla Regulator was the chief work in the winter of 1916. With an abnormally low river progress on the foreshore was considerable and it would have been completed altogether but for a rise in the river at the end of March which prevented the clearance of part of the foreshore on the right side down to the 857 level. Thus what remains to be cleared of the foreshore consists of No. 3 Tunnel on the right and its girders with a few isolated reefs in this vicinity. Towards the centre and left the clearance was very thorough and all was cleared down to 857.00 level. During the year 6½ lakhs c.ft. of rock and wet material was removed from the foreshore. The excavation done in the Mangla Cut was nearly 48 lakhs c.ft. chiefly in rock and clay stone in the head reach, and to a large extent consisting of the removal of the big slip that occurred in August 1915, which was noticed in the last year's report.

Several of the distributaries on the main line and Gujrat Branch were completed.

The training works at the tail of the canal where they are connected with those upstream of the Khanki Head Works (Lower Chenab Canal) on the right bank of the Chenab river were completed. The very necessary weir across the Bhimber Diversion Channel was sanctioned and three-fourths completed.

2. The expenditure of Rs. 44,399 was incurred chiefly on providing release gear for dropping the Canal gates at Suketar I and II and Jabba; raising crests of undersluices at Suketar I and II and Jabba; Mangla Out, part E; approach and patrol roads in the Mangla Division, protection below tail fall at R. D. 418,500 feet, main line; fixing mattress in the bed of Bhimber Diversion; and petty works in connection with improvements at Mangla.

3. Expenditure of Rs. 418,781 was incurred on the maintenance and watching of canal banks, strengthening weak reaches, maintenance of buildings, Canal drains and plantation, protection downstream of Suketar II and Jabba level crossings, and revetment of the canal in front of the Mangla Regulator.

4. The following table compares the figures of rainfall with the average of the last seven years :—
Nature of Seasons and state of Demand
and Supply.
Kharif, 1916.
Rabi, 1916-17.

Station.					1916-17.	Average.
					Inches.	Inches.
Mangla	39.05	24.30
Pauranwala	35.00	12.10
Dinga	29.12	15.18
Kirariwala	28.10	9.30
Mand	20.65	7.40

There was heavy rainfall during *kharif* but no winter rains.

This was the first year of irrigation from this canal. The canal supply reached five-eighths of its maximum discharge during the year. A large new canal with high embankments requires a cautious increase of supply. With small periodical increments the formation of berms kept pace with the increase in supply and strengthened the banks.

This year was also the first during which the waters of three rivers (Jhelum, Chenab and Ravi) were distributed amongst the connected canals (Upper Jhelum, Lower Jhelum, Upper Chenab, Lower Chenab and Lower Bari Doab Canals) by rotational turns. The rotation programme was arranged by Chief Engineer after consultation with the Superintending Engineers of the canals concerned.

Area irrigated.
Kharif, 1916.
Rabi, 1916-17.

5. The irrigation effected was :—

	AREA IRRIGATED.			AREA ASSESSED.		
	<i>Kharif</i> .	<i>Rabi</i>	Total.	<i>Kharif</i> .	<i>Rabi</i> .	Total.
Main Line	13,699	19,607	33,306	13,502	19,007	32,509
Gujrat Branch	28,714	55,585	84,299	28,510	53,172	81,682
Total	42,413	75,192	117,605	42,012	72,179	114,191

The development of irrigation has not been as rapid as was anticipated in the Project forecast. It was expected that an area of 245,000 acres would be irrigated in 1916-17, but this expectation was not realized chiefly because irrigation commenced a year later than was anticipated. The heavy rainfall during *kharif* and an abnormally low river during *rabi* which necessitated long closures on new channels due to the introduction of rotational canal turns also contributed towards the failure to reach the forecast.

6. The gross income from all sources amounted to Rs. 83,631 and the working expenses to Rs. 6,40,795, resulting in a loss of Rs. 5,57,164 or 1.27 per cent. on the capital invested. This is attributable to the fact that this was the first irrigation year on this canal and the water rates were collected for *kharif* crop only. The working expenses were also heavy and this was to be expected on the new canal which needed larger expenditure on staunching and consolidating the banks of the canals and its distributives in the early days of irrigation in order to admit of the required supply of water being run without causing any damage to banks. It should be noted, however, that the Upper Jhelum Canal is part of the triple canals and that the expenditure incurred on it is mostly on behalf of the other two units and therefore the percentage of profit based on local income, working expenses and capital expenditure is not a fair indication of the utility of the Upper Jhelum Canal.

7 (a) Most of the tramway material made available for sale or transfer, due to completion of works, was sent to Mesopotamia and a fair proportion of surplus plant was also disposed of during the year.

(b) Special arrangements made for dealing with the timber traffic down the Jhelum river enabled the raftsmen to get all their timber down, in spite of the abnormally low river, and in all some 127,000 sleepers were taken out at Chaugar and removed later by the Canal Railway.

(c) The names of the Divisions on this Canal were changed from I, III, IV and V to Mangla, Jhelum, Phalia and Gujrat Divisions, respectively.

LOWER JHELM CANAL.

(SUPERINTENDING ENGINEER—MR. W. P. SANGSTER, C.I.E.)

1. The expenditure (direct and indirect) amounted to Rs. 27,399, but the recovery of Rs. 2,140 from cultivators on account of acreage rate, and a credit of Rs. 31,706 under the suspense account (stock issues to works) and receipts of Rs. 22,147 on capital account, reduced it to a minus figure of Rs. 32,594. This brought the total outlay to the end of the year to Rs. 1,59,33,168. The expenditure was incurred chiefly on Superintending Engineer's office and quarters at Sargolha, and the remodelling of the Mithalak distributary.

2. Expenditure amounting to Rs. 72,463 was incurred chiefly on constructing a combined water-course for the Civil Station and the Government Engineering School at Rasul; remodelling two bays of the Head Regulator at Rasul; obtaining gates for the Mona Distributary; providing caissons for remodelling the Head Regulator; and raising a girder skew bridge on the North-Western Railway over the Mithalak distributary.

3. Expenditure to the extent of Rs. 2,91,635 was incurred on the annual maintenance of channels, masonry works, buildings; and on repairs to Bay No. 7 downstream floor and talus of Bay No. 2, Rasul Weir; filling up scour holes below the undersluices; stone filling at Groynes Nos. 6 and 7 upstream of the weir; levelling 30 feet of the stone berm below the weir; and repairs to Groyne No. 7 upstream of Rasul Weir.

Nature of Seasons and state of Demand
and Supply:
Kharif, 1916.
Rabi, 1916-17.

4. The rainfall during the year was as follows as compared with that of the previous three years :—

District.	Season.	YEAR.			
		1913-14.	1914-15.	1915-16.	1916-17.
Shahpur	<i>Kharif</i> ...	12.84	17.02	3.96	14.36
	<i>Rabi</i> ...	8.23	4.22	0.56	1.78
Total	...	16.07	21.24	4.52	16.14
Jhang	<i>Kharif</i> ...	13.66	12.40	1.98	9.77
	<i>Rabi</i> ...	8.09	2.33	0.36	0.85
Total	...	16.75	16.33	2.34	10.65

The rainfall was above the average during *kharif* and below the average during the *rabi*. No rain fell between first week in October and last week in March, except a small quantity near the head of the canal. On April 10th there occurred at the tail of the canal, a hailstorm of exceptional severity which affected about 20 small villages, necessitating the giving of half remissions to above 1,100 acres. During *kharif* canal water was ample and there were no insect pests or other calamities. The area sown was above the normal and the yield good. The area remitted was unusually low. During *rabi* rotational closures were started practically for the first time on this canal and the people felt them keenly.

The shortage in supply due to low river did not begin to make itself felt until late in December, and the areas sown with wheat, barley, and *toria* were well up to normal. Demand during the last three months of the *rabi* season, when the available supply was persistently low, was intensely keen. Second waterings were still being given after 15th March to some fields.

5. The canal was closed for 15 days during *kharif* owing to slackness of demand for water and special repairs to works. The area remitted was 6,371 acres including 2,106 acres remitted under Tenancy Rules. About half of this was due to short supply in *rabi* and the balance to other causes.

6. The areas irrigated and assessed compare as follows with the corresponding figures for the average of the preceding triennium :—

District.	AVERAGE OF THE 3 YEARS ENDING 1915-16.			1916-17.		
	<i>Kharif.</i>	<i>Rabi.</i>	Total.	<i>Kharif.</i>	<i>Rabi.</i>	Total.
<i>Irrigated areas.</i>						
Gujrat	4,363	8,870	13,163	4,067	7,783	11,850
Shahpur	189,814	494,934	634,748	191,563	469,871	664,134
Jhang	39,888	88,600	128,488	41,307	87,110	128,477
Total	234,065	592,334	826,399	236,997	564,764	804,761
<i>Assessed areas.</i>						
Gujrat	4,283	8,781	13,064	4,053	7,765	11,818
Shahpur	181,935	487,830	669,735	192,113	465,440	657,553
Jhang	35,947	86,186	122,143	41,217	85,666	126,913
Total	222,165	582,807	804,972	237,413	558,871	796,284

LOWER JHELUM CANAL.

WORKING RECORD.
1916-17.

N.B.—The intercepts in red area give the Kharif irrigation each year. The discharges are measured at mile 14 of the main canal and give averages for each crop.
The duties are derived from these areas and discharges.

LOWER JHELM CANAL.

FINANCIAL RECORD.

1916-17.

N.B.—The intercepts in the red area show arrears of interest which, added to the capital, give the sum at charge.

The intercepts in the blue area give the accumulated profits.

The scheme was commenced in earnest in 1898-99 and opened in 1901. Until 1905-06 the canal did not pay any interest on its capital cost this being due to free remissions of water rates on new irrigation.

The increase in area irrigated in *kharif* was due to an ample supply of water assisted by good rainfall. The reason for the decrease in *rabi* was the unprecedented drought and abnormally low rivers which necessitated rotational working of five canal systems on a definite programme of an experimental type. Out of the total area of 804,761 acres irrigated 405,920 acres were in proprietary villages and 398,841 acres in colony villages.

7. The gross receipts (direct and indirect) amounted to Rs. 47,38,593, the working expenses to Rs. 9,83,962 and the net revenue to Rs. 37,54,631, giving a return of 23·57 per cent. on the capital outlay to the end of the year. This return was about 8 per cent. more than that of the preceding year due to—

Financial results based on collections :
Rabi, 1915-16.
Kharif, 1916.

- (a) a decrease in the capital outlay by about Rs. 33,000 as explained in paragraph 1 above.
- (b) increase in the area irrigated during *kharif* 1916 and *rabi* 1915-16, revenue on which was collected during the year.
- (c) very small area having been affected by the failure of crops and the consequent grant of very low remissions.

The figures for the year 1916-17 and the average of the preceding three years are compared below :—

Item.					Average triennium, 1913—16.	1916-17.
Direct receipts.					Rs.	Rs.
Occupiers' rates	26,74,820	29,00,746 (a)
Miscellaneous receipts	61,801	64,164 (b)
Total direct receipts	27,36,621	29,73,910
Indirect receipts	15,27,350	17,64,683 (c)
Total direct and indirect	42,63,971	47,38,593
Charges to revenue	8,94,993	9,83,962 (d)
Net revenue	33,68,978	37,54,631
Percentage on capital	21·13	23·57
Net revenue less interest	28,30,722	32,41,710
Percentage on capital	17·76	20·34

- (a) The increase is due to causes explained in paragraphs 6 and 7 above. The average rate per acre assessed works out to Rs. 3·65 against Rs. 3·32 for the previous triennium.
- (b) The increase was due to larger realizations from water power and miscellaneous other receipts.
- (c) The increase follows the increase under (a) above.
- (d) The working expenses were about one lakh more than the average of the last three years. The cause of this increased expenditure is being enquired into. The rate per acre of area assessed was 1·24 against 1·11 in the preceding triennium.

8. The agricultural and other conditions of the year have been described in paragraph 4 above. The introduction for the first time of the system of rotational closures lends a special interest to the year under review. The relative performances of the last five *rabi* seasons may be compared by the following values of Δ in the Sargodha Division :—

					Δ
<i>Rabi</i> , 1912-13	2·05
" 1913-14	1·82
" 1914-15	1·85
" 1915-16	1·96
" 1916-17	1·75

The fact that Δ for the last *rabi* is the lowest is significant, when it is remembered that there was a complete failure of the winter rains, and that the falling off in area sown was in such crops as gram, senji and maina which require less water than the staple crops. Enquiry showed that the wheat outturn was, if anything, above the normal. The *rabi* delta of 1916-17 indicates less waste of water than in previous years, but it is still high.

(b) Proposals for the remodelling of the entire canal system are being framed by the Special Project Division created for the purpose. Remodelling work was actually begun on the Mithalak distributary. The introduction of a notched fall in the canal in place of the old raised crest below the off-take of this channel appears to have had a beneficial effect upon its persistent tendency to silt. At the time of writing, the channel is drawing, gauge for gauge, the same supply as after it was silt-cleared last November, and since then no silt clearance has been found necessary.

(c) Irrigation on the Sulki Branch is steadily improving. This branch serves the Ara Assessment Circle, the land of which does not lend itself easily to canal irrigation. This is due to a very hard crust of surface soil which forms after it has been watered.

UPPER SUTLEJ DIVISION INUNDATION CANALS.

(SUPERINTENDING ENGINEER—MR. F. W. K. YLDMAN.)

1. The expenditure amounted to Rs. 1,465 and was incurred mainly on constructing subordinates rest-houses at Bunga Hayat, Ladhewal and Kalewal.

Capital accounts :
Kharif 1916
Rabi 1916-17.

2. Expenditure of Rs. 13,928 was incurred chiefly on remodelling the head of Pakpattan and Faridpur distributaries ; widening the platform and raising the crest of the Hujra and Shah Yaka and Dhulliana Regulators ; widening, regrading and extending the Dhingshah distributary ; and the reduction of outlets on the Wanawala distributary.

Extension and improvement.

3. Expenditure incurred was Rs. 2,57,504 which, in addition to ordinary maintenance and silt clearance of channels, was incurred on the following works :—Excavating the Nijabat head reach of the Sohag Canal so as to make it independent of the Khizra reserve head of the Khanwah Canal and the Khizra head reach of the Lower Sohag Canal ; regrading and improving the Atari and Haveli distributaries ; and excavating the three diversion cuts in the head reach of the Katora Canal, thereby shortening its length by about 2 miles.

Maintenance and repairs.

4. The gross income amounted to Rs. 6,08,794 and working expenses to Rs. 4,41,186, showing a net revenue of Rs. 1,67,396 or 9.19 per cent. on the capital invested. The previous percentage was 18.50.

Financial results based on collections :
Rabi 1915-16.
Kharif 1916.

5. The following table compares the irrigation of this year with the averages of the two previous triennia :—

Crop.	AVERAGE OF THREE YEARS ENDING				1916-17.	
	1912-13.		1915-16.		Gross irrigated.	Area assessed.
	Gross irrigated.	Area assessed.	Gross irrigated.	Area assessed.		
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif ...	150,404	123,092	107,045	156,378	152,560	142,355
Rabi ...	143,142	143,142	166,193	166,193	160,501	160,591
Total ...	293,546	266,234	333,238	322,571	313,151	302,947

The net area assessed exceeded by 36,713 acres, the average of the triennium ending 1912-13, and was less by 19,624 acres than the average of the three

years ending 1915-16, which included the record year of 1914-15. This is quite satisfactory, taking into consideration the fact that the river remained abnormally low throughout the month of May, thereby delaying the date of opening of the canals by more than two weeks.

6. (a) The following table shows the dates of opening and closing of the canals together with the corresponding dates of the previous year :—

Name of canal.	DATE OF OPENING.		DATE OF CLOSING.		NUMBER OF DAYS CANAL WAS IN FLOW.		REMARKS.
	1918.	1915.	1916.	1915.	1916.	1915	
Katora	Forenoon, 29-5-16.	Forenoon, 16-5-15.	Forenoon, 9-11-16.	Afternoon, 16-10-15.	164	160	
Khanwah	Forenoon, 30-5-16.	Forenoon, 11-5-15.	Afternoon, 30-10-16	Afternoon, 25-10-15.	154	109	
Upper Sohag	Forenoon, 29-5-16.	Forenoon, 9-5-15.	Afternoon, 30-10-16.	Afternoon, 14-10-15.	155	150	
Lower Sohag	Afternoon, 31-5-16.	Forenoon, 10-5-15.	Afternoon, 21-9-16	Afternoon, 11-10-15.	110	155	

(b) During this year also, as in the previous year, several important works of improvement calculated to increase the area of irrigation were introduced. The river left both the heads of the Lower Sohag Canal high and dry after a flood in the month of August. Steps were taken to excavate the Khiwa head reach which proved to be a great success, as it has increased the supply in the canal for 1917-18 by at least 50 per cent. In addition, a diversion cut was excavated at a cost of Rs. 2,500 to induce the river to adopt a course favourable for the two heads which were left stranded and this cut has also worked quite satisfactorily so far. A further improvement was the reduction of outlets on the Wanawala distributary which enable the tail reach to get its proper share of the water, which it had not done for several years. Necessary steps for giving sufficient supplies of water to the tails of several other channels also were successfully taken during the year.

SIDHNAI CANALS (INCLUDING THE KORANGA, FAZIL SHAH AND ABDUL HAKIM SUBSIDIARY CANALS).

(SUPERINTENDING ENGINEER—MR. A. R. MURRAY.)

1. Expenditure of Rs. 4,529 (direct and indirect) was incurred on stock transactions.

Capital account:
Kharif 1916.
Rabi 1916-17.

Settler's account.—The sum of Rs. 31-12-0 shown as received during the year 1915-16 on account of repairs to bridges on Sidhnai Canal has further increased to Rs. 236-14-6 during the year. Recoveries are being made by the Deputy Commissioner, Multan.

2. The expenditure was Rs. 11,006 against Rs. 10,516 of the previous year, and was incurred on remodelling Riazabad Minor, Lalera Minor, Chauparhatta distributary and Vinoli distributary, and constructing subordinates' rest-house at Sidhnai, Sub-Overseer's quarters at Jodhpur and other works of a petty nature.

3. The expenditure amounted to Rs. 51,873 against Rs. 43,062 of the preceding year, and was incurred on the ordinary annual repairs, silt clearance and strengthening of canal and distributaries.

Nature of seasons and state of demand and supply:
Kharif 1916.
Rabi 1916-17.

4. The total rainfall at Kabirwala was 6.95 inches (5.35 inches in *kharif* and 1.60 inches in *rabi*) against an average of 6.26 inches.

The Ravi rose very late and water did not enter the canal till the 23rd June. The supply was low until the 30th June. Throughout July irrigation was much interrupted by frequent occurrence of floods, which necessitated the closing off of the canals to exclude silt. The supply was good in September and October, and fair in November, giving the *rabi* a good start.

The very late arrival of the water is noteworthy, but it is useful to remember that it was later in 1908, and in 1898 water arrived on 21st July. In these two years the late opening cannot be attributed to the influence of the Triple Canals.

There was no water in the river after 12th December 1916, but by this date about one-eighth of the *rabi* area was estimated to have had a second watering.

5. The following table shows the irrigation effected on the whole system as compared with the averages of the two previous triennia :—

Crops.			AVERAGES OF THREE YEARS ENDING		1915-16.	1916-17.
			1912-13.	1915-16.		
			Acres.	Acres.	Acres.	Acres.
Kharif	111,674	127,386	117,999	114,933
Rabi	138,526	153,119	152,151	183,623
Total	250,100	285,505	270,150	298,556

The percentage of failed crops was 13·96 in *kharif* and 17·7 in *rabi* against 16·46 in *kharif* and 18·06 in *rabi* of the preceding year. This is not unsatisfactory in view of the late arrival of water and absence of winter rains during the *rabi* maturing period.

6. The total income from all sources amounted to Rs. 5,89,749 against Rs. 8,32,779 of the preceding year. Working expenses amounted to Rs. 1,59,012 against Rs. 1,46,592 in 1915-16. The net income amounted to Rs. 4,30,737, or 32·25 per cent. on the capital outlay, against Rs. 6,86,187, or 51·5 per cent. in the preceding year. The decrease is due to the *rabi* area of 1915-16, assessments on which were realized in the year under review being far short of that of the year 1914-15 owing to deficiency in river supply.

The uncollected balance of the assessment of occupiers' rates amounted to Rs. 3,128.

7. The total area irrigated is the second highest on record, and the year may, therefore, be said to have been a successful one.

The question of the distribution of Ravi water between the Lower Bari Doab and the Sidhnai Canals has been satisfactorily settled.

During the course of the winter monthly discharge observations of the river Chenab at Haveli and Shershab were made with the object of putting the data for the Haveli Project on a firmer footing.

The Executive Engineer has brought to notice the very wasteful system of flooding for the ensuing *rabi* crops, which is in vogue on the canal. The compartment or *khal kiari* rules are almost universally ignored. Areas of 3 or 4 acres, consisting of 4 or 5 fields, are irrigated by leading the water through one field into the other, the depth of watering being probably 6 to 8 inches. He calculates that the *rabi* area might have been $1\frac{1}{2}$ times greater than it was, or assuming that the available area was all irrigated, about two-thirds of the whole might have received a second watering instead of only one-eighth.

No new works of any magnitude are contemplated.

INDUS INUNDATION CANALS.

(SUPERINTENDING ENGINEER—MR. A. R. MURRAY.)

1. The expenditure amounted to Rs. 9,045 compared with Rs. 1,51,024 during the preceding year, and was incurred on lowering the bed of the Manka Canal and on the scheme for giving a perennial supply of water for irrigation to the Dera Ghazi Khan Municipality. The former work is complete and the latter practically so.

Capital account:
Kharif 1916.
Rabi 1916-17.

2. Rupees 1,15,320 were spent compared with Rs. 1,17,195 during the preceding year. The following were the more important works in progress:—Constructing a second ring bund behind the Kotla Bund; new head reach, Fazalwah Canal; Chabri flood embankment; new head reach, Kasturi Canal; Dhan Sikhani flood embankment; a groyne across the Droman Creek; Kotla Ring Bund No. 3 and Sahiban and Chibri Ring Bunds; and an extension of the Panjtanwala groyne for increasing the supply of water to Nur Dhundi and Gamun Canals.

Extensions and improvements

3. The expenditure amounted to Rs. 1,37,316 against Rs. 1,95,703 in the previous year, and was incurred on ordinary annual maintenance and repairs, silt clearance of canals, strengthening of certain flood embankments and other miscellaneous works.

4. The average rainfall during *kharif* was 5.71 inches and during *rabi* 0.29 inches against an average of 3.77 inches and 1.66 inches respectively. The river Indus was late in rising, but remained fairly normal after the first week in June. Demand was keen. Some damage to crops resulted from severe frost during November and paucity of rainfall during the *rabi* season.

Nature of seasons and state of demand and supply:
Kharif 1916
Rabi 1916-17

The following statement shows the period during which canals were in flow:—

Name of canal.	Dates of		Number of days canal was in flow.
	Opening.	Closing.	
Massuwah	3rd June 1916 ..	10th September 1916.	99
Fazalwah	16th May 1916	29th October 1916.	166
Manka	25th March 1916	23rd October 1916.	213
Shoria	1st May 1916 ...	19th October 1916.	166
Kasturi	17th April 1916	24th September 1916.	148
Dhingana	9th April 1916 ..	10th October 1916.	171
Chibri	27th May 1916...	11th October 1916.	130
Sahiban	20th May 1916...	11th October 1916.	121
Gamun	15th May 1916...	29th September 1916.	117
Nur Dhundi.	3rd May 1916 ...	27th March 1917	328
Dhundi Kutab	27th April 1916	22nd October 1916	175
Kadma	14th May 1916...	1st November 1916.	171

The Manka Canal was opened early with a low supply to enable irrigation in the Civil Station of Dera Ghazi Khan to be carried out. The Nur Dhundi Canal flowed almost the whole winter with a small but valuable supply.

5. The following table compares the area assessed with the average areas of the previous two triennia :—

Area irrigated :
Kharif 1916.
Rabi 1916-17.

Name of crop.					AVERAGE OF THREE YEARS ENDING		1916-17.
					1912-13.	1915-16.	
					Acres.	Acres.	Acres.
Kharif	132,553	115,205	140,470
Rabi	80,217	68,948	67,910
Total					212,770	179,153	208,380

The gross and net areas irrigated during *kharif* were 179,941 and 140,470, respectively, against 138,124 and 102,147 acres of the preceding year.

During *rabi* the gross and net areas irrigated were 85,217 and 67,910 against 97,517 and 79,882, the decrease being due to earlier fall in the Indus.

6. The total income from all sources was Rs. 5,28,309 against Rs. 4,37,175 in 1915-16, and the total expenditure under all heads Rs. 3,98,604 against Rs. 4,41,584. The net profit was, therefore, Rs. 1,29,705 against a deficit of Rs. 4,409 in the preceding year, and an average profit of Rs. 43,786 in the previous triennium.

The uncollected balance of the assessment of occupier's rate was Rs. 43,271.

The percentage on the capital outlay during the year was 4.35.

7. The results of the year's operations were, on the whole, satisfactory, the gross area irrigated being the third largest on record

The river continued to give trouble at the head of the Dhundi Kutab Canal and the head regulator was engulfed. Erosion here has been very persistent for many years and so long as the westward drift continues it must cause much anxiety and expense.

Some erosion took place at the head of the Manka Canal. This canal also suffered from breaching due to hill torrents.

The principal works of importance under contemplation are :—

- Amalgamating Sohan Branch of Nur Dhundi Canal with Gamun Canal in order to improve irrigation on both.
- Constructing the Aquilpur Minor. This work has been sanctioned, but is held in abeyance for want of funds.
- Constructing new head reach for the Dhundi Kutab Canal.

Minor Irrigation Works.

SHAHPUR IMPERIAL (INUNDATION) CANALS.

(SUPERINTENDING ENGINEER—Mr. W. P. SANGSTER, C.I.E.)

Capital account :
Kharif 1916.
Rabi 1916-17.

Extensions and improvements.

Maintenance and repairs.

1. No expenditure was incurred under this head.

2. No expenditure was incurred during the year.

3. Expenditure to the extent of Rs. 18,939 as against Rs. 25,157 in the previous year was incurred on silt clearance and maintenance and repairs.

4. The rainfall was 20.08 inches against 3.53 inches in the previous year. During *kharif* the rainfall was 18.66 inches and during *rabi* 1.42 inches. Of the *kharif* rainfall there was 0.15 inches in April, 0.68 inches in May, 2.95 inches in June, 5.34 inches in July, 8.26 inches in August, and 1.28 inches in September. Of the *rabi* rainfall there was 0.92 inches in October, 0.06 inches in December 1916, and 0.44 inches in March 1917; the months of November 1916, January and February 1917 were dry.

The canals were opened during April 1916 and were closed early in September 1916. Although the supply in the river was low, yet the canals were running satisfactorily.

On the 26th April 1917 there was a hailstorm which spoiled some crops, but the loss was not as much as it was in the previous two years. A total area of 477 acres was remitted.

5. The irrigation of the year compares as follows with the averages of the two previous triennia :—

Season.					Average for the three years ending		Actual for 1916-17.
					1912-13.	1915-16.	
					Acres.	Acres.	Acres.
Kharif	14,298	15,830	19,683
Rabi	18,238	23,420	27,086
Total					32,536	38,750	46,769

(a) The area successfully matured and assessed was 43,981 acres as against 34,458 acres, the average of the previous triennium. The increase is mostly due to the favourable condition of the river and timely rainfall during the *rabi* season.

(b) Revenue was remitted on 1,788 acres of which 1,581 acres were remitted on account of bad germination, 44 acres due to high supply causing flooding of fields, and 163 acres due to insects and blight.

6. The gross revenue realized amounted to Rs. 1,15,018 and working expenses to Rs. 47,175, leaving a net revenue of Rs. 67,843, which is equivalent to a return of 31.42 per cent. on Rs. 2,15,914, the capital outlay up to date.

Details compare as follows with the average for the preceding triennium :—

Details.					Average for the three years ending 1915-16.	Actual for 1916-17.
					Rs.	Rs.
Receipts, direct	90,905	80,313
Receipts, indirect	17,776	34,672
Total					1,08,681	1,15,018
Working expenses	52,666	47,175
Net revenue	56,015	67,843
Percentage of net revenue on capital	25.94	31.42

The increase is due to timely rainfall and favourable condition of the river.

General remarks.

7. The canals began and ceased to flow on the following dates :—

	Began to flow.	Ceased to flow.
Eastern Station Canal ...	16th April 1916 ...	20th September 1916. "
Western Station Canal ...	20th April 1916 ..	19th September 1916.
Sahiwal Canal ...	21th April 1916 ...	20th September 1916.

The return of 31.42 per cent. on the capital cost for the year under review against 22.68 per cent for the previous year, is more than satisfactory.

GHAGGAR CANALS.

(SUPERINTENDING ENGINEER—MR. G. O. LAURIE.)

1. There was no expenditure under this head during the year. The capital outlay at the end of the year, therefore, remained the same as at end of the previous year, viz., Rs. 6,61,571,—Imperial, Rs. 3,76,129; Contribution, Rs. 2,85,442.

Capital account—
Kharif 1916
Rabi 1916-17

2. Expenditure was Rs. 2,632, i.e., Rs. 1,999 under "Imperial" and Rs. 633 under "Contribution," and was incurred on petty works of improvement.

Extensions and improvements

3. Expenditure was Rs. 6,936 under "Imperial" and Rs. 1,814 under "Contribution" as compared with Rs. 11,643 and Rs. 2,518, respectively, for the preceding year. The expenditure was normal.

Maintenance and repairs

4. (a) *Kharif* (1916).—There were light showers of rain during April, May and June, but these did not benefit sowings. The monsoon broke about the middle of July and was well distributed. There was good general rainfall in August and light showers during September. The heaviest falls recorded were 4.2 inches on 16th July at Kamrauli in Bikaner State, 4.5 inches at Otu on 6th August, and 2.4 inches at Mauju Khara on 14th September.

Nature of seasons and state of demand and supply
Kharif 1916
Rabi 1916-17

The rainfall was considerably above the average of the previous 17 years.

Water first reached Otu Weir on the 18th June which was unusually early, but the supply was poor and the lake was not filled till 22nd July. The direct minors were opened on the 30th June, but the supply of water was not sufficient for opening the main canals till 20th July. The demand then was not keen owing to local rainfall. Later the supply was fairly good for the rest of the season.

(b) *Rabi*.—Supply for ploughing and sowing was good. There was little or no rain, except light showers, in October, January and March, and that little was insufficient for maturing the crop properly. The area cropped was large, but the outturn was poor in quantity.

(c) *Rainfall*.—The average rainfall of all stations for the year 1916-17 was :—

British	17.70 inches,
Bikaner	13.90 "

against British 3.15 inches and Bikaner 2.2 inches during 1915-16.

Water was escaped down the river from 23rd to 30th July, again on 5th, 7th to 20th, 24th to 27th August and 6th-7th September. The maximum escape was on 13th August, when the downstream gauge was 8.0 feet.

The Northern and Southern Canals ran for 66 and 67 days, respectively, during *khari* and 26 days during *rabi* with average discharges of 725 and 234 cusecs, respectively.

5. The following table shows the area irrigated in British and Bikaner Territories during the last five years ending 1916-17. The area in British Territory includes area assessed by the Civil Department :—

Crop.	1912-13.			1913-14.			1914-15.			1915-16.			1916-17.		
	British.	Bikaner.	Total.	British.	Bikaner.	Total.	British.	Bikaner.	Total.	British.	Bikaner.	Total.	British.	Bikaner.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Khari	23,835	2,295	26,090	9,690	5,115	14,805	9,330	1,563	10,893	4,218	12	4,230	10,737	3,254	13,991
Rabi	17,527	4,014	21,541	3,035	1,720	4,755	15,662	6,403	22,065	17,785	3,753	21,538	11,090	8,786	19,876
Total	41,362	7,179	48,531	12,725	6,835	19,560	24,992	8,066	32,458	22,006	3,165	25,171	21,827	12,040	33,867
Total number of days canal was in flow.	Northern Ghaggar Canals...		46	73			102			50			92		
	Southern Ghaggar Canals ..		32	80			100			56			93		

The area irrigated was the highest on record. The figures for 1913-14 to 1916-17 do not include the area under *palewar* (watered but not sown and on which no water-rates are charged), whereas the figures for the previous years include *palewar*. The *palewar* area included in 1912-13 was 23,098 acres, so that the true area irrigated that year was 25,433 acres and not 48,531 acres as shown in the table.

The land under fluctuating assessment is not subject to water-rates, but the canals receive a credit for any fluctuating revenue in excess of an average of Rs. 37,000 per annum.

The amount of occupier's rate assessed was Rs. 4,330 in *khari* and Rs. 18,245 in *rabi* and the rate per acre assessed works out to 4.29 and 2.5, respectively.

6. *British*.—The operation of the year resulted in a loss of Rs. 8,630 which is equivalent to 2.29 per cent. on the capital outlay compared with a loss of Rs. 18,473 equivalent to 4.91 per cent. in the previous year. So long as the canals receive no revenue for the greater part of the irrigation which they effect, they cannot be expected to be remunerative.

7. The result of the year's working would have been very satisfactory if all land paid water-rates. Although the land-owners of the old inundation area have no longer the expense of maintaining their old channels, their former bunds and the high embankments round their fields, they nevertheless pay no water-rates and their fluctuating crop rates are credited to the Civil Department and not to the canals.

The canals form a very useful public work, but, owing to the method of crediting the revenue indicated above, they appear yearly as irrigation propositions worked at a loss at least as regards Imperial expenditure and revenue.

The canals were in flow for 93 days against 53 days in 1915-16 and 120 days in 1914-15.

The area remitted in British Territory was 813 acres in *Kharif* and 784 acres in *Rabi*. The approximate value of crops matured on the Ghaggar Canal in British Territory amounted to Rs. 8,88,547 against Rs. 5,67,751 in the previous year.

The principal crops grown are wheat and rice.

(b) *Nature and scope of contemplated new works and progress made on the preparation of new projects*—The estimate for raising the reservoir level by 3 feet so as to get a more continuous supply of water for the canals, which was originally submitted in 1912, was again submitted in a slightly revised form after more careful study of the subject. It was, however, considered best to take no further action on the subject for the present as it is possible that the northern canal area may hereafter form part of the Sirhind Canal under the Bakra Dam Project, and in that case the existing reservoir storage capacity would be sufficient for the Southern Ghaggar Canal.

(c) *Working of the Ghaggar Canals in the Bikaner State*.—The indents made by the State authorities were complied with in full whenever sufficient water was available, but the State authorities often refused to take water to the extent available. The largely improved area, however, irrigated in Bikaner State seems to show that the channels there must be getting into better condition.

The following details of irrigation have been supplied by the State :—

Canals.				1916-17.			1915-16.		
				Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.
				Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Northern Canal	2,403	6,979	8,382	12	1,999	2,011
Southern Canal	851	2,807	3,658	Nil	1,157	1,157
Total	3,254	8,786	12,040	12	3,156	3,168
Flow	3,251	8,786	12,010	12	3,156	3,168
Lift	Nil	Nil	Nil	Nil	Nil	Nil
Total as above	3,254	8,786	12,040	12	3,156	3,168

The following table shows the working of the canals as reported by the State : -

Particulars.					1915-16.	1916-17.
<i>Receipts.</i>					Rs.	Rs.
Water-rate	8,408	27,616
Miscellaneous	154	337
Total					8,562	27,953
<i>Working expenses.</i>						
Establishment	2,913	2,756
Other expenses	8,908	2,269
Total					11,821	5,025
Profit or loss (net)	- 3,259	+ 22,928

It will thus be seen that the Bikaner State got a profit of 8.03 per cent. on the working of the canals for the year under review, the contribution capital account standing at Rs. 2,85,442.

LOWER SUTLEJ CANALS DIVISION.

(SUPERINTENDING ENGINEER—MR. A. R. MURRAY.)

Capital account:
Kharif 1916.
Rabi 1916-17.

1. These canals are classified under 43—Minor Works and Navigation for which no Capital Account is kept.

2. The expenditure amounted to Rs. 45,922 against Rs. 54,227 in the preceding year and Rs. 34,441 the average of the previous triennium. It was chiefly incurred on constructing diversions of the Muhammadwah Canal and a masonry toe wall below the Islam Escape, Mailsi Canal, and making additions and alterations to Islam inspection house, Mailsi Canal.

3. Expenditure amounted to Rs. 86,519 against Rs. 1,11,535 in the preceding year and Rs. 1,27,779 the average of the previous triennium, and was incurred on ordinary maintenance of canals, etc.

4. The total rainfall at Lodhran was 10.97 inches against an average of 4.07 inches. No rain fell during the *rabi*. The demand was keen throughout. The Sutlej was late in rising, and indigo and other early crops suffered, but canal supplies were good during the latter part of the *kharif* season and continued well into the *rabi*.

The following statement gives the dates of opening and closing of the canals during the year :—

Name of canal.	DAYS OF		Number of days canal was in flow.
	Opening.	Closing.	
Hajiwah	29th May 1916	4th November 1916	157
Mailsi	4th June 1916	20th December 1916	187
Muhammadwah	18th May 1916	22nd November 1916	162
Bahawalwah Lodhran	18th June 1916	21st October 1916	142

5. The following table compares the areas irrigated and matured with the average of the preceding triennium :—

Area irrigated
Kharif 191
Rabi 1916-17.

Season.	Canal.	AVERAGE FOR THREE YEARS ENDING 1915-16.		1916-17.	
		Irrigated.	Matured.	Irrigated.	Matured.
Kharif	Hajiwah ...	16,390	13,375	14,072	11,913
	Sutlej Series ...	125,681	107,021	185,001	115,279
	Total ...	142,071	121,299	149,073	127,192
Rabi	Hajiwah ...	25,265	23,978	30,031	24,172
	Sutlej Series ...	146,250	139,696	184,777	169,249
	Total ..	171,515	163,674	214,811	193,421
GRAND TOTAL		313,586	284,973	363,884	320,613

The total area which failed to mature was 43,271 (*viz.*, 21,831 acres during kharif and 21,390 during rabi) against 41,751 acres during the preceding year. The increase is mainly attributable to lack of rainfall during the *rabi* maturing period.

6. The total income from all sources was Rs. 6,26,728 against Rs. 6,21,610 in 1915-16, and the total expenditure Rs. 2,39,727 against Rs. 2,85,454 in the preceding year. The net revenue amounted to Rs. 3,87,001 against Rs. 3,36,156 for the year 1915-16, and an average of Rs. 3,20,796 in the previous triennium.

Financial results based on collection :
Rabi 1915-16,
Kharif 1916.

The uncollected balance of the occupier's rate amounted to Rs. 67 only.

7. The gross area irrigated and the area matured are the second highest on record. The result of the year's operations may, therefore, be said to be, on the whole, very satisfactory.

General remarks.

The amalgamation system of running channels in Lodhran Sub-Division is now complete, and remodelling with the object of improving distribution is in hand. The width of some of the larger channels is being increased to enable them to carry correct supplies.

A masonry crossing of 2,000 cusecs capacity was constructed at the expense of the Southern Punjab Railway over the Hajiwah Canal to provide an outfall for river spill partially blocked by the Sutlej Valley Railway.

As the result of river erosion the Muhammadwah Canal was penetrated in October at a point about 8 miles from its off-take from the river, necessitating the construction of a diversion.

CHENAB INUNDATION CANALS.

(SUPERINTENDING ENGINEER—MR. A. R. MURRAY.)

Capital account :
Kharif 1916.
Rabi 1916-17.

1. There is no capital account for these canals. They are classified under 43—Minor Works and Navigation.

2. The expenditure was Rs. 23,706 against Rs. 11,214 of the year (1915-16). This was incurred mainly on excavating new heads for the Wali Muhammad and Matithal Canals, remodelling Qutabpur Minor, and fixing iron pipe outlets in Lower Bakhtuwah with its branches.

Extensions and improvements

3. Expenditure of Rs. 78,023 against Rs. 1,05,894 of the preceding year, was incurred on ordinary silt clearance of canals, repairing breaches, and strengthening banks.

4. The rainfall during *khariif* 1916 was 3.89 inches in Tahsil Multan and 6.65 inches in Tahsil Shujabad. It did a much good to the *khariif* crops and supplemented canal irrigation. The rainfall during *rabi* was 2.53 inches in Multan and 0.20 inches in Shujabad.

The river Chenab remained abnormally low till the 1st week of June and consequently the opening of canals was late. It, however, rose rapidly after this date and gave good supplies until the end of August.

The statement below gives the dates of opening and closing:—

Name of canal.	DATES OF		Number of days canal was in flow.
	Opening.	Closing.	
Matithal	11th June 1916	25th September 1916	100
Daurana Langana	10th June 1916	24th September 1916	83
Wali Muhammad	5th June 1916	23rd September 1916	83
Sikanderabad	24th May 1916	16th October 1916	138
Gajjuhatta	3rd June 1916	13th October 1916	111
Balochanwah	12th June 1916	26th September 1916	97

The head of the Matithal Canal silted up during floods, which resulted in its partial failure. The Wali Muhammad and its main branch, the Daurana Langana, had to be run in rotation for some time owing to silting up of the head. The Sikanderabad and Gajjuhatta systems worked exceptionally well, and the Bilochanwah had a comparatively good supply.

Area irrigated :
Khariif 1916.
Rabi 1916-17.

5. The following table compares the areas irrigated with the averages of previous triennia :—

Crops.	AVERAGES OF THREE YEARS ENDING		1915-16.	1916-17.
	1912-13.	1915-16.		
	Acres.	Acres.	Acres.	Acres.
Khariif	101,141	95,030	84,107	93,537
Rabi	80,469	100,576	86,378	111,518
Total	181,610	195,606	170,485	205,075

The area which failed to mature was 17,001 acres or 18.18 per cent. of the total area irrigated during *khariif* and 7,317 acres or 6.55 per cent. of the total area irrigated during *rabi*.

6. The total income from all sources was Rs. 4,43,797 against Rs. 4,71,361 of the previous year, and the total expenditure under all heads was Rs. 1,55,764 against Rs. 1,72,292. The net income was, therefore, Rs. 2,88,033 against Rs. 2,99,072 of the preceding year and an average of Rs. 2,81,569 for the previous triennium.

Financial results based on collections:
Rabi 1915-16,
Kharif 1916.

The uncollected balance of the occupier's rate was Rs. 3,858.

7. Generally speaking, the Chenab Canals did well during the year. The crops were fair and there were no calamities.

General remarks.

Indigo was extensively sown, much of it on well irrigation, to meet a keen demand. Wheat was also sown extensively, and its yield was good in spite of scanty rainfall during the maturing period.

A high flood came down the river between 16th and 18th July and the gauge at Shershab rose to 18.8 inches on 19th July 1916. As a result of this flood the Dhundu flood embankment in the Shujabad Tahsil breached, but the damage done was not great. This bund is maintained by the District Board of Multan.

River erosion continued near Buch in the neighbourhood of the Guj-juhatta Canal, but was not so serious as in previous years.

The Lower Bakhtawah distributary was piped, and further piping of distributaries will be carried out as funds permit. It is proposed to re-contour the tract commanded by these canals. An accurate contoured map is greatly to be desired and should prove of considerable service in designing the alignments of distributary channels when the Haveli Project scheme is taken up in detail.

MUZAFFARGARH CANALS DIVISION.

(SUPERINTENDING ENGINEER—MR. A. R. MURRAY)

1. No capital account is kept for these canals. They are classified under 43—Minor Works and Navigation and Agricultural.

Capital account -
Kharif 1916,
Rabi 1916-17.

2. The expenditure amounted to Rs. 36,403 against Rs. 24,170 in the preceding year, and was incurred mainly on completing and extending piping and remodelling of channels and building new falls, stop dams and tail clusters.

Extensions and improvements

In addition to the above Rs. 10,739 against Rs. 9,859 during the preceding year, were spent from the "Agricultural fund" on extension and strengthening of embankments and completing works in progress at end of the preceding year.

3. The expenditure amounted to Rs. 1,76,475 against Rs. 1,96,207 during 1915-16 and was incurred on ordinary silt clearances of canals, repairing breaches, strengthening and raising banks, and improving supplies. Rupees 14,431 in addition was expended from the "Agricultural fund" on maintenance of inspection houses and flood embankments.

Maintenance and repairs.

4. The rainfall during *kharif* was exceptionally heavy, especially in the month of August, and consequent flooding damaged a considerable area of crops, chiefly in the Sanawan Tahsil. No rain fell during *rabi*. Both the Indus and Chenab were late in rising; the latter so much so that the canals off-taking from it could not be opened till well on towards the middle of June. Thereafter, however, it maintained a high level and the canals received good supplies, which were well maintained until September. Floods came down both rivers during August, but did no damage.

Nature of season and state of demand and supply:
Kharif 1916,
Rabi 1916-17.

The following statement gives the period during which canals were in flow :—

Name of canal.		Date of opening.	Date of closing.	Number of days canal was in flow.
Indus Series	Kot Sultan ...	12th May 1916 ...	1st December 1916 ...	201
	Magasson ...	14th May 1916 ...	16th October 1916 ...	155
	Maggi ...	1st May 1916 ...	18th October 1916 ...	168
	Ghatta ...	1st May 1916 ...	30th September 1916 ...	153
	Puran ...	26th March 1916 ...	25th November 1916 ...	233
	Suleman ...	14th May 1916 ...	10th October 1916 ...	150
Chenab Series	Karam ...	15th June 1916 ...	12th September 1916 ...	88
	Ganesh ...	11th June 1916 ...	1st October 1916 ...	111
	Taliri ...	16th June 1916 ...	2nd October 1916 ...	113

5. The following statement shows the areas irrigated as compared with the averages of the two previous triennia :—

Areas irrigated;
Kharif 1916.
Rabi 1916-17.

Name of crop.	AVERAGE FOR THREE YEARS ENDING 1912-13.			AVERAGE FOR THREE YEARS ENDING 1915-16.			1916-17.		
	Matured area.	Failed area.	Percentage of kharifa.	Matured area.	Failed area.	Percentage of kharifa.	Matured area.	Failed area.	Percentage of kharifa.
Kharif ...	Acres 139,489	Acres 22,948	Acres 14.1	Acres 126,024	Acres 22,408	Acres 16.0	Acres 155,023	Acres 14,668	Acres 8.8
Rabi ...	203,055	12,549	5.8	213,648	14,279	6.8	215,049	13,720	6.0
Total ...	342,544	35,492	9.4	340,672	36,687	9.7	370,072	28,388	7.1

The percentage of failed area, although slightly above that of the preceding year, is lower by 2.6 per cent. than that of the previous triennium and less than in any other year since 1902.

6. The total revenue amounted to Rs. 7,53,898 against Rs. 6,46,213 in 1915-16, and the working expenses to Rs. 3,51,426 against Rs. 3,57,977. The net revenue amounted to Rs. 4,02,472 against Rs. 2,88,236 of the preceding year and an average of Rs. 2,94,256 for the previous triennium.

The uncollected balance of the occupier's rate amounted to Rs. 2,720.

7. The year's results were generally excellent. In spite of the late opening of the Chenab Series the areas, both matured and irrigated, for the whole Division constitute a record.

The new feeder for the Suleman Canal gave results which surpassed expectation. The supply on this channel was equal to the demand throughout the year and the area irrigated showed an increase of 22 per cent.

The Sanawan drain was successful in preventing water-logging near the tahsil building until August, but its capacity then proved unequal to coping with the heavy rain and flooding from neighbouring high lands, though subsequently it considerably hastened drying.

The compulsory closing of the Maggi and the Magasson Canals on the 16th October conduced to early drying of the low lands commanded by these channels and facilitated sowing of rabi crops.

Further attention is being given to the question of drainage, and old drains and depressions are being cleared of obstructions and put in order.

Steady progress continues to be made in remodelling and regrading channels and in the substitution of iron pipe outlets for open cuts. The improved results obtained for the year are undoubtedly due to the better distribution made possible by these means.

The necessity for increasing the escape capacity of many channels is an important question and several schemes for this purpose are being investigated.

SHAHPUR (PROVINCIAL) INUNDATION CANALS.

(SUPERINTENDING ENGINEER—MR. W. P. SANGSTER, C.I.E.)

Capital account :
Kharif 1916.
Rabi 1916-17.

1. No capital account is kept for these canals.

Extensions and improvements.

2. No expenditure was incurred under this head.

3. Expenditure to the extent of Rs. 26,168 against Rs. 19,329 in the previous year was incurred on the usual maintenance and repairs and silt clearance. The corresponding expenditure during the preceding 22 years averaged Rs. 14,228 per annum. The increase during the year is being investigated.

Nature of seasons and state of demand and supply :
Kharif 1916.
Rabi 1916-17.

4. The rainfall was 20.08 inches (*kharif* 18.06 inches and *rabi* 1.42 inches) against 3.43 inches in the preceding year.

Demand for canal water was moderate, there being sufficient rain during *kharif*. Supply in the river was satisfactory. The canals were opened and closed on the following dates :—

	<i>Date of opening.</i>	<i>Date of closing.</i>
Raniwah Canal	... 23rd April 1916	20th September 1916.
Corbynwah Canal	... 14th May 1916	6th September 1916.

The corresponding dates of opening and closing averaged over the preceding 22 years, were as follows :—

	<i>Date of opening.</i>	<i>Date of closing.</i>
Raniwah Canal	... 16th April 1916	14th September 1916.
Corbynwah Canal	... 12th April 1916	10th September 1916.

The Raniwah opened a week later and closed six days later than the average dates of the past, and the Corbynwah opened about a month later and closed four days earlier than the past average.

Area irrigated :
Kharif 1916.
Rabi 1916-17.

5. The area irrigated compares as follows with the averages of the two preceding triennia :—

Season.				AVERAGE OF THREE YEARS ENDING		Actual for 1916-17.
				1912-13.	1915-16.	
				Acres.	Acres.	Acres.
Kharif	17,034	14,920	6,855
Rabi	8,349	11,788	24,510
Total	25,683	26,768	31,404

The figures for the *kharif* and *rabi* crops are not comparable with the averages of the two previous triennia on account of transfer of *kharif* irrigation of grass to *rabi*. The compliance of orders issued previously on the subject is being insisted upon.

The increase in irrigation over the preceding two triennia is due to the satisfactory state of the river supply and timely rainfall.

Revenue was remitted on 1,659 acres, of which 1,213 acres were remitted under Tenancy Rules. 320 acres due to bad germination, and 26 acres due to high supply causing the flooding of fields

6. The revenue receipts and expenditure of the year compare as follows with the figures of the previous triennium :—
 Financial result based on collections :
 Rabi, 1915-16.
 Kharif, 1916

Details.	Average triennium ending 1915-16.	Actual for 1916-17.
	Rs.	Rs.
Total assessments, direct and indirect ...	51,679	71,047
Receipts, direct and indirect	51,689	45,405
Working expenses	39,216	47,609
Net revenue ...	12,473	— 2,141

There was a loss of Rs. 2,141 on the year's working which is due to higher working expenses and considerable area irrigated free of water-rates under Tenancy Rules. This area amounts to 1,213 acres.

SIMLA :

The 8th October 1917.
